868MHZ AC4486/4868 SERIES - WIRELESS TRANSCEIVER MODULES

Compact 868MHz transceivers can replace miles of cable in harsh environments. Using field-proven RF technology which needs no additional ETSI (Europe) licensing, OEMs with little or no previous RF experience can easily and quickly make existing systems wireless.

BLUETOOTH MODULE KIT

The development board allows the Laird Bluetooth or Wireless W-LAN Module to be connected to a PC. The development board provides RS-232 level conversion through a standard 9 way D type connector to all pins of the 40 way and a 50 way Hirose connectors used by Bluetooth or Wireless LAN interface.

WLM400/WLM402 HIGH-PERFORMANCE 802.11B/G MODULE

WLM400 High-Performance 802.11b/g Module delivers performance to embedded designers requiring the high data rates available from WiFi networks. The only embedded wireless LAN module providing this level of performance, the WLM400/WLM402 is designed to make wireless integration simple with its ultimate throughput, low-power consumption, and ease of use. Based on the Marvell 8686 Wi-Fi chipset, the additional application processor includes a robust, industrial grade TCP/IP stack and driver implementation to save months of embedded firmware development. It is ideal for streaming wireless applications, whether as infrastructure connections or video cable replacement in ad-hoc mode.

BLUETOOTH MODULES

Laird's Bluetooth embedded modules are designed with compatibility in mind. Laird's Bluetooth Intelligent Serial technology. The pin configuration and physical dimensions of both the Wireless Module (BISM) are the same giving you the choice of wireless.
