

SHARP LCD Displays

This product is RoHS compliant.

SHARP
MICROELECTRONICS
OF THE AMERICAS

Sharp displays make life easier.

From the smallest 2.2" display to the 64.5" display with stunning contrast and brilliant brightness, we have a product that will fit your design. And because it's Sharp, you will know the display modules are built to the performance specifications you need. Commercial displays are an excellent option when performance and price requirements dictate; however, in some applications, it is preferable to pay a premium to design using an industrial-grade display. The time you spend up front selecting a display will pay off in the long run.

MEMORY LCD MODULES

The thin 1.35-inch display can be ordered with two connection options: FPC or elastomeric. The FPC comes with a flex cable, which simplifies the connection to the display and allows for different mounting methods. With the quick set-up elastomeric module option, no connector is needed. Just align it with a circuit board and make immediate contact. These 1.35-inch Square LCDs are loaded with features that deliver a display capable of smooth-moving graphics, with 50% reflectance and low power usage of 10µW. The LCDs are visible in a 0.5 lux environment without requiring a light source. With the new Sharp Memory LCD, embedded 1-bit memory in every pixel enables each pixel to hold state while requiring very little current. This delivers an "always on" display that uses little power (only a single supply voltage is required), even when updating images. A lightweight, two-glass design with an integrated driver in the panel provides an exceptionally thin module that's a perfect solution for compact handheld, wrist-top, and other small-screen devices that benefit from displaying rich content. Incorporating the Memory LCD into a design is simple with 3-wire SPI serial interface (SI, SCS, SCK).

HANDHELD DISPLAYS

Making the right display choice for handheld applications.

Handheld devices must be able to meet the demands of a media-rich environment.

Sharp handheld LCDs are ideal for next-generation mobile devices from PDAs to GPS devices to portable medical equipment.
