DIGI 6310-DX

Avoid network outages with primary or backup LTE connectivity; integrate seamlessly with existing infrastructure

The Digi® 6310-DX LTE cellular extender serves as an ideal failover solution by retrofitting your infrastructure for cellular network access. Powered by the Digi® CORE 1002-CM 4G LTE plug-in modem, dual SIM slots can further protect against downtime by automatically switching to a secondary cellular carrier should the primary SIM lose Internet access. A suite of Digi CORE 1002-CM plug-in modems let Digi enterprise routers leverage the category of LTE best suited for their use case — standard LTE, LTE with EV-DO fallback, or LTE-Advanced.

Couple the Digi 6310-DX with a dedicated wireline ISP connection to provide dual-WAN connectivity, maximize uptime and ensure business connectivity for connected devices that demand reliable network availability, such as POS systems, mobile kiosks and digital signage. Deployments are streamlined with installation accessories that include a disposable battery pack for site survey, (passive) PoE injector for optimizing placement for best cellular reception and a mounting bracket.

The Digi centralized management platform provides easy setup, configuration and support for installations of Digi and third-party devices. Digi Remote Manager® and aView ™ offer web-based device management solutions to securely monitor and control Digi enterprise routers and gateways -- and the health or your network -- after deployment.

FEATURES AND BENEFITS

– 4G LTE certified Digi CORE 1002-CM plug-in modem
– LTE-Advanced, standard LTE, or LTE with EV-DO fallback
– Upgrade to meet changing cellular standards
– Ethernet WAN port for wireline network access
– Optimized connectivity to any Ethernet device
– Optional remote mounting kit for site survey and PoE installation
– Zero-touch provisioning and cloud management
– Onboard signal strength and network status indicators

CAPABILITIES

– Centralized management of remote devices over 3G/4G/LTE

– Define standard configurations and automatically monitor individual devices for PCI security compliance

– Report and alert on performance statistics, including connection history, signal quality, latency, data usage and packet loss

– No servers or applications to operate and maintain

– Complete tasks for your entire device network in minutes

– Edit configurations and update firmware for your individual devices or groups

– Monitor the status and location of your remote device via a web browser

– Active or deactivate cellular lines and monitor data to ensure you never incur overage charges

INFRASTRUCTURE

– Hosted in a commercial-grade SAS 70-certified environment

– Superior availability, operating to 99.9% or greater

– Open APIs available to support application development

SECURITY

– Certified SSAE-16 facilities

– Over 175 Security Controls in place to protect your data

– Enables compliance with security frameworks like PCI, HIPAA, NIST and more

– Earned SkyHigh's Cloud Trust Program highest ranking of Enterprise-Ready
