

### SJxx12xx series

#### Description

This SJxx12xx high junction temperature SCR series is ideal for uni-directional switch applications such as phase control in heating, motor speed controls, converters/rectifiers, inrush current control and capacitive discharge ignitions.

These SCRs have a low gate current trigger level of 6mA, 10mA or 20mA maximum at approximately 1.5V.

#### Features & Benefits

- Halogen free and RoHS compliant
- Surge capability up to 120 A at 60 Hz half cycle
- 150°C maximum junction temperature

#### Applications

Typical applications include AC Generator (ACG) rectifiers, battery voltage regulators and generic converters and inrush current controller in various AC to DC applications. Additional applications include controls for power tools, home/brown good and white goods appliances.

Isolated packages offered for ease of heat sinking.

#### Agency Approval

| Agency | Agency File Number |
|--------|--------------------|
|        | L Packages: E71639 |

#### Schematic Symbol

#### Main Features

| Symbol            | Value      | Unit |
|-------------------|------------|------|
| $I_{T(RMS)}$      | 12         | A    |
| $V_{DRM}/V_{RRM}$ | 400 or 600 | V    |
| $I_{GT}$          | 6 to 20    | mA   |

### Absolute Maximum Ratings

SUPPLY FREQUENCY: 60 Hz Sinusoidal  
LOAD: Resistive  
RMS On-State Current: [ $I_{T(RMS)}$ ]: Maximum Rated Value at Specified Case Temperature

**Notes:**

1. Gate control may be lost during and immediately following surge current interval.
2. Overload may not be repeated until junction temperature has returned to steady-state rated value.

| Average ramp up rate (Liquidus Temp) ( $T_L$ ) to peak |                                    | 5°C/second max          |
| $T_{s(max)}$ to $T_L$ - Ramp-up Rate                   |                                    | 5°C/second max          |
| Reflow                                                 | - Temperature ( $T_L$ ) (Liquidus) | 217°C                   |
|                                                        | - Time ( $t_L$ )                   | 60 – 150 seconds        |
| Peak Temperature ( $T_p$ )                             |                                    | 260 <sup>+0/-5</sup> °C |
| Time within 5°C of actual peak Temperature ( $t_p$ )   |                                    | 20 – 40 seconds         |
| Ramp-down Rate                                         |                                    | 5°C/second max          |
| Time 25°C to peak Temperature ( $T_p$ )                |                                    | 8 minutes Max.          |
| Do not exceed                                          |                                    | 280°C                   |

### Physical Specifications

|                        |                                                         |
|------------------------|---------------------------------------------------------|
| <b>Terminal Finish</b> | 100% Matte Tin-plated                                   |
| <b>Body Material</b>   | UL recognized compound meeting flammability rating V-0. |
| <b>Lead Material</b>   | Copper Alloy                                            |

### Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including dv/dt), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.

### Environmental Specifications

| Test                              | Specifications and Conditions                                              |
|-----------------------------------|----------------------------------------------------------------------------|
| <b>AC Blocking</b>                | MIL-STD-750, M-1040, Cond A Applied Peak AC voltage @ 150°C for 1008 hours |
| <b>Temperature Cycling</b>        | MIL-STD-750, M-1051, 100 cycles; -55°C to +150°C; 15-min dwell-time        |
| <b>Temperature/Humidity</b>       | EIA / JEDEC, JESD22-A101 1008 hours; 160V - DC: 85°C; 85% rel humidity     |
| <b>High Temp Storage</b>          | MIL-STD-750, M-1031, 1008 hours; 150°C                                     |
| <b>Low-Temp Storage</b>           | 1008 hours; -40°C                                                          |
| <b>Resistance to Solder Heat</b>  | MIL-STD-750 Method 2031                                                    |
| <b>Solderability</b>              | ANSI/J-STD-002, category 3, Test A                                         |
| <b>Lead Bend</b>                  | MIL-STD-750, M-2036 Cond E                                                 |
| <b>Moisture Sensitivity Level</b> | Level 1, JEDEC-J-STD-020D                                                  |
