Description

The MAAL-011129 is an easy-to-use three stage low noise amplifier with high gain and broadband 50 Ω match. It is designed for operation from 18 to 31.5 GHz and housed in a lead-free 2 mm 8-lead PDFN plastic package.

The MAAL-011129 has an integrated active bias circuit and bias tee to allow direct connection to V_{DD} without external chokes or DC blocks. The bias current is set by a simple external resistor, R_B , so the user can customize the power consumption. When $V_{BIAS} = 0$ V, the device is placed in power down mode.

The MAAL-011129 offers an easy-to-use surface mount, low noise amplifier solution that is well suited to diverse receiver applications such as VSAT, Point-to-Point and 24 GHz ISM.

Application Information

The MAAL-011129 is designed to be easy to use yet provide high performance. The ultra small size, with no matching, and simple bias application allows easy placement on system boards.

Parts List

Des.	Purpose	Value	Size	Part Number
C1 C2	Bypass	0.01 μ F	0201	Murata GRM033R70J103KA01D
R _B	Bias Resistor	See chart	0201	various

Single Bias Operation

Connecting V_{DD} to V_{BIAS} using an external resistor R_B enables single bias operation of the amplifier, and the value of external resistor R_B sets the desired current I_{DD} . The following table shows drain current (I_{DD}) versus external resistor (R_B) values for V_{DD} voltages of 5 V and 3.3 V:

$V_{DD} = 3.3 \text{ V}$		$V_{DD} = 5 \text{ V}$	
$R_B (\Omega)$	$I_{DD} (\text{mA})$	$R_B (\Omega)$	$I_{DD} (\text{mA})$
Open	15	Open	25
200	50	200	80
400	40	400	70
1k	30	1k	50
2k	25	2k	40

Application Schematic

With pin 4 (V_{BIAS}) left open the amplifier will default to low power mode. When pin 4 (V_{BIAS}) is set to 0 V through R_B , the device enters power down mode. In order to use power down mode a second supply is required that directly drives the R_B resistor.

Grounding

It is recommended that the total ground (common mode) inductance not exceed 0.03 nH (30 pH). This is equivalent to placing at least four 8-mil (200- μ m) diameter vias under the device, assuming an 8-mil (200- μ m) thick RF layer to ground.
