

# EVQ4571-QB-00A

## 60V, 1A, High-Efficiency, Synchronous Buck Converter Evaluation Board

### DESCRIPTION

The EVQ4571-QB-00A evaluation board is designed to demonstrate the capabilities of MPS's MPQ4571/MPQ4571-AEC1.

The MPQ4571/MPQ4571-AEC1 is a fully-integrated, fixed-frequency, synchronous step-down converter. It can achieve up to 1A of continuous output current with peak current control for excellent transient response.

The MPQ4571/MPQ4571-AEC1 employs advanced asynchronous mode (AAM) to achieve high efficiency under light-load conditions by scaling down the switching frequency. This reduces switching and gate driving losses.

The EVQ4571-QB-00A is a fully assembled and tested evaluation board that can generate a 5V output voltage at load currents up to 1A from a 5V to 60V input range.

### ELECTRICAL SPECIFICATIONS

| Parameter      | Symbol    | Value   | Units |
|----------------|-----------|---------|-------|
| Input voltage  | $V_{EMI}$ | 5 to 60 | V     |
| Output voltage | $V_{OUT}$ | 5       | V     |
| Output current | $I_{OUT}$ | 1       | A     |

### FEATURES

- Wide 5V to 60V Operating Input Range with 1A Continuous Output Current
- High-Efficiency Synchronous Mode Control
- 250mΩ/45mΩ Internal Power MOSFETs
- Configurable Frequency Up to 2.2MHz
- 180° Out-of-Phase SYNCO Clock
- 40μA Quiescent Current
- Low Shutdown Mode Current: 2μA
- Selectable AAM or Forced CCM Operation at Light-Load
- Internal 0.45ms Soft Start
- Remote EN Control
- Power Good Indicator
- Low-Dropout Mode
- Over-Current Protection
- Thermal Shutdown
- Available in a QFN-12 (2.5mmx3mm) Package
- AEC-Q100 Grade 1

### APPLICATIONS

- Automotive Systems
- Industrial Power Systems

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS", the MPS logo, and "Simple, Easy Solutions" are trademarks of Monolithic Power Systems, Inc. or its subsidiaries.

### EVALUATION BOARD

(LxWxH) 8.3cmx8.3cmx1.3cm

| Board Number   | MPS IC Number   |
|----------------|-----------------|
| EVQ4571-QB-00A | MPQ4571GQB-AEC1 |

### Efficiency vs. Load Current vs. Power Loss

$V_{OUT} = 5V$ ,  $f_{sw} = 400kHz$ ,  $L = 15\mu H$ , AAM

## QUICK START GUIDE

1. Preset the power supply ( $V_{IN}$ ) between 5V and 60V. Electronic loads represent a negative impedance to the regulator, and will trigger hiccup mode if set to a sufficiently high current.
2. Turn the power supply off. If longer cables are used between the source and the EVB (>0.5m total), install a damping capacitor at the input terminal, especially when  $V_{IN}$  exceeds 24V.
3. Connect the power supply terminals to:
  - a. Positive (+): VEMI
  - b. Negative (-): GND
4. Connect the load to:
  - a. Positive (+): VOUT
  - b. Negative (-): GND
5. Turn the power supply on after making the connections.
6. To use the enable function, apply a digital input to the EN pin. Drive EN above 1.45V to turn on the regulator; drive EN below 1.12V to turn it off.
7. The oscillating frequency of the MPQ4571/MPQ4571-AEC1 can be configured by an external frequency resistor ( $R_{FREQ}$ ).  $R_{FREQ}$  can be estimated with Equation (1):

$$R_{FREQ} (M\Omega) = \frac{30}{f_{SW} (kHz)} \quad (1)$$

The calculated resistance may need fine-tuning via bench test.

8. The output voltage is set by the below T-type feedback network (see Figure 1).

**Figure 1: T-Type Feedback Network**

The resistors ( $R6 + R4$ ) also sets the loop bandwidth with the internal compensation capacitor. Choose  $R4$  to be about 40k $\Omega$ . Then  $R5$  can be calculated with Equation (2):

$$R5 = \frac{R4}{\frac{V_{OUT}}{0.8} - 1} \quad (2)$$

Table 1 lists the recommended feedback resistor values for common output voltages.

**Table 1: Feedback Resistor for Output Voltages**

| <b>V<sub>OUT</sub> (V)</b> | <b>R4 (kΩ)</b> | <b>R5 (kΩ)</b> | <b>R6 (kΩ)</b> |
|----------------------------|----------------|----------------|----------------|
| 3.3                        | 41.2 (1%)      | 13 (1%)        | 20 (1%)        |
| 5                          | 41.2 (1%)      | 7.68 (1%)      | 20 (1%)        |
| 12                         | 41.2 (1%)      | 2.94 (1%)      | 20 (1%)        |

9. JP3 and JP4 can be used to install an external shielding above inductor and IC. JP3 and JP4 are not required components for the application.
