

Uni-directional Ultra Low Capacitance ESD Protection Diode

DESCRIPTIONS

The TESDH5V0U04P2Q1 is an ultra-low capacitance ESD protection diode which includes two uni-directional ESD rated clamping cells to protect high speed data interfaces. It has been specifically designed to protect sensitive electronic components which are connected to data and transmission lines from over-stress caused by ESD (Electrostatic Discharge).

TESDH5V0U04P2Q1 is a unique design which includes proprietary clamping cells in a small package. During transient conditions, the proprietary clamping cells prevent over-voltage on the control/data/power lines, protecting any downstream components.

The TESDH5V0U04P2Q1 may be used to provide ESD protection up to $\pm 20\text{kV}$ (contact and air discharge) according to IEC61000-4-2, and withstand peak pulse current up to 4A (8/20 μs) according to IEC61000-4-5.

APPLICATION INFORMATION

Device Connection

The TESDH5V0U04P2Q1 is designed to protect two data lines from transient over-voltage (such as ESD stress pulse). The device connection of TESDH5V0U04P2Q1 is shown in the Fig. 1. In Fig. 1, the two protected data lines are connected to the ESD protection pins (pin1, pin2) of TESDH5V0U04P2Q1. The ground pin (pin3) of TESDH5V0U04P2Q1 is a negative reference pin. This pin should be directly connected to the GND rail of PCB (Printed Circuit Board). To get minimum parasitic inductance, the path length should keep as short as possible.

TESDH5V0U04P2Q1 can provide protection for 2 I/O signal lines simultaneously. If the number of I/O signal lines is less than 2, the unused I/O pin can be simply left as NC pin.

The TESDH5V0U04P2Q1 is designed to protect two high speed line against ESD. The Fig.1 below shown the onnection for USB interface ESD protection
