Datasheet

Taoglas Reach Series - PCS.66.A

Description:

Reach Low Profile Wideband 5G/4G SMD Antenna

Features:

Patent Pending Innovative Design

High Efficiency Wideband Antenna, Covering 600 to 6000 MHz

Supporting 5G FR1 Bands

600 MHz 5G/4G Band 71 Support

Backwards Compatible with all 3G/2G applications

Surface Mount Distribution – Supplied on Tape & Reel

Dimensions: 32 x 25 x 1.6 mm

RoHS & REACH Compliant

Ireland ISO 9001: 2015 Certified · ISO 9001 CERTIFICATION EUROPE · Taiwan ISO 9001: 2015 Certified · QA RNATIONAL · UKAS QUALITY MANAGEMENT 046 · QUALITY MANAGEMENT SYSTEM IATF16949

1. Introduction

The Taoglas Reach series, are a revolutionary, low profile, small footprint, range of patent pending SMD mount PCB wide-band antennas. The PCS.66.A has been designed to cover all 5G bands, including all sub-6GHz deployments across the 600MHz to 6000MHz spectrum on a very small footprint of just 32 x 25mm. It also covers 3G and 2G bands to allow for fall-back when 5G/4G is not available.

The patent pending design uses printed circuit board material and innovative design techniques to deliver the highest efficiencies at all bands when mounted on the device's main PCB. The PCS.66.A is suitable for lower cost 5G/4G applications, especially IoT projects requiring wide bandwidth and comes supplied on tape and reel to allow it be mounted via 'pick & place' onto the PCB.

If tuning is required, it can also be tuned specifically depending on device environment. If PCB space is an issue, the Reach PCS.86, covering 791 – 6000MHz, could be an option with an even smaller footprint of just 32 x 16mm. Contact your local Taoglas customer support team for advice on integrating the Reach into your device.

1. **Highest efficiency in small footprint**

   A comparative antenna to the Reach, for example, metal/ceramic/FPC, would have much-reduced efficiency in this configuration due to their high substrate loss at high frequencies. Very high efficiency antennas are critical to 4G and 5G devices ability to deliver the stated data-speed rates of systems such as 5G and 4G.

2. **Low profile**

   Many antennas require a large keep-out area in addition to the mechanical size to work correctly, which limits the usable PCB space. The Reach requires only .3 mm of additional keep-out, allowing board designers to maximize their PCB space.

3. **Adaptable**

   The high radiation efficiency of the Reach over its entire operating bandwidth means that the total efficiency is only limited by the impedance mismatch loss. As a result, this antenna can be optimized via a matching network to the specific bands needed for any application. Efficiencies as high as 90% have been measured when the return loss is very high (-15 dB or more).

4. **More resistant to detuning compared to other antenna integrations**

   If tuning is required it can be tuned for the device environment using a matching circuit, or other techniques on the main PCB itself. There is no need for new tooling, thereby saving money if customization is required.

5. **Surface Mount Distribution (SMD)**

   Direct mount, 'on-board' antennas save on labor, cable and connector costs, leads to higher integration yield rates and reduces losses in transmission.

6. **Minimum Transmission and Reception Losses**

   These are kept to an absolute minimum resulting in much improved OTA (over the air), i.e. TRP (Total Radiated Power) / TIS (Total Isotropic Radiation), device performance compared to similar efficiency cable and connector antenna solutions. This means it is an ideal antenna to be used for devices that need to pass for example USA carrier network approvals.

2. Specifications

Electrical								
Standard	5G NR Band 71/LTE/GSM/CDMA	5G NR Band 74,75,76	LTE/GSM/HSPA/ CDMA	UMTS/ HSPA	Wi-Fi 2400	LTE 2600	5G NR Band 77,78,79	Wi-Fi 5800

Pads 2 and 3 are the same size. Pads 4 and 6 are the same size. Pad 1 should be connected to a 50 ohm transmission line.
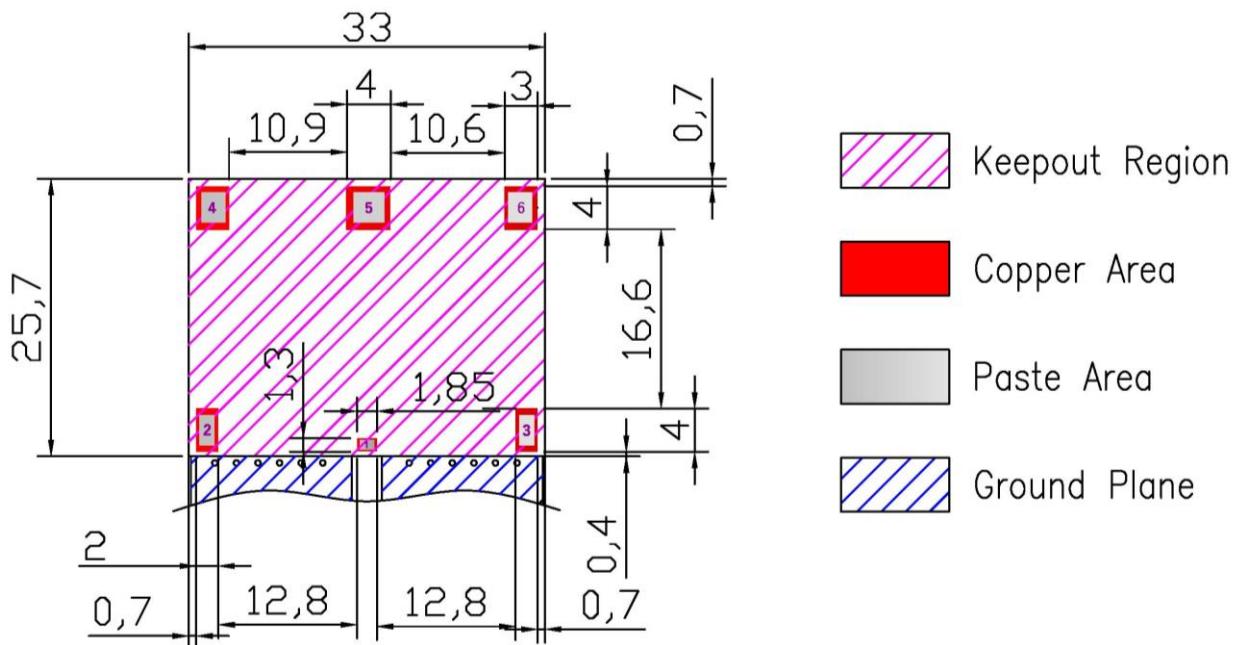

Note:

1. Ground Keepout should extend through any inner PCB layers and any sides around the antenna until the board edge to minimize coupling from feed to ground, except the side facing system ground

2. Any vias in pads should be either filled or tented to prevent solder from wicking away from the pad during reflow

3. The dimension tolerances should follow standard PCB manufacturing guidelines

4. Solder paste area is 75% of copper area dimensions

5. Centre of mass is 1.17mm offset in Y from geometric centre
