

CJ-M-20

J-Clip Wires - 20cm, 2-pack, Male breadboard ends, Black and Red

CJ-M-20 Features:

- J-clip securely grabs 0.1" header pins without touching adjacent pins.
- Wire is soldered to the clip (not just crimped) for a reliable connection.
- Red & black colors provided. 20cm overall length.
- Smooth machined male pins designed for breadboard use. Strain relief heatshrink tubing.
- Great for use with solderless breadboards (such as the BB830 and BB400).

CJ-M-20 Details:

The CJ series wires have J-clip hooks and male breadboard pins. They are great for making secure electrical off-board connections for your breadboard. The J-Clip grabs tightly to wires and pins to make a reliable connection. The J-Clip is better than alligator clips for connecting to connector header pins because it can connect to one pin without touching adjacent pins.
