

LT3967/LT3960

1.3A 8-Switch Matrix LED Dimmer with I²C
to CAN-Physical Layer Transceiver**DESCRIPTION**

Demonstration circuit 2686A is a 1.3A 8-switch matrix LED dimmer system with an I²C to CAN-physical transceiver featuring the [LT[®]3967](#) and [LT3960](#). This demonstration circuit connects directly to a LED string and LED driver demonstration circuit to allow for independent dimming control of up to 8 channels of LEDs. A Linduino[®] One demonstration circuit is used to interface with the board and can connect in one of two different ways:

1. Connect directly to a Linduino One demonstration circuit with a QuikEval[™] ribbon cable.
2. Connect using the LT3960 break-off board to connect to the I²C master device, but pass data over two twisted pair lines to the LT3960 on the main PCB.

The LT3967 matrix dimmer features 8 individually controlled 1.3A rated floating NMOS switch channels and can support up to 56V of LEDs per device. The channels of the LT3967 can be configured for series connections, or non-series connections. Additional DC2686A demo circuits can be connected in series for higher number of LEDs, or in parallel to allow for higher current operation. Resistors are used to configure both the I²C slave address as well as the default start-up state. The default configuration for DC2686A sets the I²C address as 0000 with all LEDs off. See the LT3967 data sheet for details.

The LT3960 I²C to CAN-Physical transceiver is used to send and receive I²C data through harsh or noisy environments at up to 400kb/s using the CAN-Physical layer for differential signaling over twisted pair connections. Both SDA and SCL data lines are converted to differential signals and are shared between devices connected to the bus. This allows for physical separation of the I²C source with the LT3960 transceiver board and the LT3967 main PCB along with the LED driver.

This demo circuit is designed to be easily configured and interfaced with a compatible low output capacitance LED driver and LED string. It can easily be directly attached to a buck LED driver or a floating buck-mode LED driver. More sophisticated setups with series matrix dimmers for higher number of LEDs such as 12 or 16 is possible. Please consult factory applications for details or look for more details on [analog.com](#).

The LT3967 and LT3960 data sheets give complete description of the parts, their operation and applications information. The data sheets must be read in conjunction with this demo manual for demonstration circuit DC2686A. The LT3967EFE is assembled in a thermally enhanced 28-lead TSSOP package. The LT3960EMSE is assembled in a 10-lead MSOP package.

DEMO MANUAL DC2686A

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^\circ\text{C}$

PARAMETER	CONDITION	MIN	TYP	MAX	UNIT
Input Voltage	LT3967, Operating LT3960, Operating	8 4.5	5	60 5.5	V V
LED Voltage	LT3967, Operating			56	V
LED Current	LT3967, Operating			1.3	A
LT3967 ENH Threshold Falling Voltage ($V_{IN} - ENH$)	$R1 = 10\text{k}$, $R2 = 49.9\text{k}$	1.10	1.22	1.34	V
LT3960 EN/MODE Voltage	Master Mode Slave Mode Low-Power Shutdown Mode	2 0.7 0		5 2 0.7	V V V
Ext LDO Output Voltage	$R22 = 392\text{k}$, $R23 = 127\text{k}$		5		V
Ext CLK Frequency	$R13 = 57.6\text{k}$		350		kHz
LT3967 PWM Dimming Frequency	Ext CLK to RTSYNC		170		Hz
LT3967, LT3960 I ² C CLK Frequency				400	kHz
LT3967 POR Initial Switch State	$RADRR[4:1] = 0\Omega$			LED Off	

QUICK START PROCEDURE

In order to properly function, DC2686A must be interfaced with a low output capacitance Buck LED driver or floating buck-mode LED driver. The input power supply to both LED driver and DC2686A must be set to at least 6V higher than each LT3967 SRC channel source voltage. This demo manual highlights interfacing DC2686A with a buck LED driver. For buck mode connections, refer to the LT3967 data sheet.

DC2686A works with a Linduino microcontroller board (DC2026C) and can be connected to a PC via USB. This allows DC2686A to be controlled via serial port interface in Arduino IDE. Refer to the [DC2026C](#) demo manual for detailed instructions on installing and configuring the necessary software and libraries.

1. Launch Arduino IDE.
2. Connect Linduino to computer via USB.

3. Download the Linduino code and library files from the DC2686A web page
4. Upload the code to the connected Linduino demo circuit.
5. With input power off, connect the input power supply from LED Driver to V_{IN} and GND of DC2686A.
6. Connect LED⁺ and LED⁻ from LED driver to DC2686A LED⁺ and LED⁻ terminals.
7. Connect 8 LEDs as shown in Figure 1 and Figure 2.
8. Connect Linduino to DC2686A using one of the two methods shown in Figure 1 and Figure 2.
9. Open up the serial monitor inside Arduino IDE.
10. Turn on input power supply.
11. Use command line interface in serial monitor to control and monitor LEDs.

DEMO MANUAL DC2686A

BOARD OPTIONS

SETUP DIFFERENCES BETWEEN BUCK VS BUCK-MODE

When using DC2686A with a buck LED driver, connect the V_{IN} of the buck LED driver directly to V_{IN} of LT3967, and ensure that V_{IN} is 6V higher than channel source voltages on the LT3967. When interfacing with a floating buck-mode LED driver, a charge pump is necessary to create the needed 6V headroom from V_{IN} to V_{SRC} . Please reference LT3967 data sheet for details on how to properly implement this.

SETTING THE ADDRESS AND POR DEFAULT SWITCH STATE

Both the I²C address and power-on-reset (POR) default switch state are configured by placing resistors between the ADDR pins. Connecting the ADDR pins either V_{DD} or GND defines the unique I²C address. Using a resistor value less than 5k to set the address configures the LT3967 to start-up with the LEDs off, and using a resistor value greater than 50k configures the LEDs to be on. Refer to the LT3967 data sheet for detailed explanation on setting the default POR settings and I²C address.

SETTING THE PWM DIMMING FREQUENCY

Dimming frequency for the LT3967 can be configured either by the internal oscillator or an external clock source. The LT3967's internal oscillator frequency is set by connecting a resistor from the RTSYNC pin to GND. Refer to the LT3967 data sheet for guidance on sizing this resistor for the desired dimming frequency.

An external clock source capable of sink 500 μ A at 0.4V can be used to override the internal oscillator. If either the internal oscillator or external clock source become slower than 100kHz, then the IC will switch to a 100kHz internal standby clock. The PWM dimming frequency is derived using clock division of the RTSYNC signal, diving down by 2048. DC2686A is equipped with an external clock source (LTC6900CS5) that can be powered from the 5V rail of either the onboard LDO or a connected Linduino.

UTILIZING LT3960 FOR SERIAL COMMUNICATION

The LT3960 can be used to communicate with the LT3967 over longer distances and/or in noisy environments. DC2686A has two LT3960 ICs, one local to the LT3967 IC, and another on a snap-off board that plugs directly into the QuikEval header of the Linduino demo circuit (DC2026C).

The LT3960 on the snap-off board is powered by a Linduino when connected via QuikEval header. The EN/MODE pin is tied to the drain of a MOSFET that can be controlled by a Linduino. The MOSFET allows configuration of IC to be set to master mode, slave, or power off. The LT3960 on the main board can be powered by the on-board LDO. EN/MODE pin is not connected, configuring this device in slave mode. Twisted pair connections should be made between the differential pins of the LT3960 using the terminal blocks to connect.

PROGRAMMING THE NUMBER OF CHANNELS

A single LT3967 can control up to 8 individual channels. For any unused channels, connect the associated DRN pins to V_{DD} with 100k resistor and the SRC pins to GND. This ensures proper fault monitoring for the unused channels.

LEDs can be driven in series by adding 0 Ω resistors to R6, R7, R10, R11, R12, R14, R15, which connects adjacent DRN and SRC channels at the J2 and J4 connectors. Channels can also be separated for individual LEDs control with non-serial LED string connections. DC2686A is configured for 8-channel operation but has resistor options that allow for easy reconfiguring to allow for as low as 6 LEDs. Solder a 0 Ω resistor to R16, R18, and 100k to R20, R21 to defeat the lower 2 channels of the LT3967.

CONFIGURING THE ARDUINO COM TERMINAL

For operation of the command line interface, parameters of the terminal window must be set properly. 115200 Baud, No line ending, and Clear output should be selected. See Figure 3 for details.

ESD Caution

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
