

Medical / Industrial AC-DC Power Supply  
200 W Convection 2" x 4" / MEP-200A□J □NA

MEP-200A

Highlights & Features

- Optional open frame and enclosed types
- Up to 22.32 W/inch<sup>3</sup> power density
- Up to 200 W output with natural convection cooling
- High efficiency up to 95%
- Up to 70 °C Ambient Operation
- Up to 1000KHrs MTBF
- 2 x MOPP Isolation
- Suited for Type BF Medical Products.
- Class B Conducted and Radiated EMI
- IEC60601-1-2 4<sup>th</sup> Edition Immunity Compliance
- Compliance with IEC 61000-4-6 20V/m for semiconductor applications

Safety Certifications

Model Number:	MEP-200A□J □NA
Unit Weight:	0.21 kg (0.463 lb) (Open Frame) 0.26 kg (0.573 lb) (Enclosed)
Dimensions (W x L x H):	
Open Frame	50.8 x 101.6 x 28.5 mm (2.0 x 4.0 x 1.12 inch)
Enclosed	62.8 x 111.2 x 32.5 mm (2.5 x 4.4 x 1.28 inch)

General Description

The MEP-200A offers 200 W output power and 3 output voltage of 12 V, 24 V and 48 V in a 2" x 4" footprint and low profile design is suitable for space-constrained applications. It supports a wide operating temperature ranging from -30°C to +70°C. Electric shock protection complying with 2 x MOPP, the MEP-200A offers reliable power supply for type BF medical equipment. The MEP-200A is certified with medical, ICT and home appliance safety approvals, including UL/ TUV/ CE/ UKCA and CB certification, as well as EMC approvals to EN 55032 Class B. It is applicable to type BF medical products, IT equipment and household appliances.

Model Information

Model Name	Input Voltage	Output Voltage	Max Continuous Current
MEP-200A12J □NA	90 - 264 Vac	12 Vdc	16.67 A
MEP-200A24J □NA	90 - 264 Vac	24 Vdc	8.34 A
MEP-200A48J □NA	90 - 264 Vac	48 Vdc	4.17 A

### Model Numbering

						CC Code	
MEP –	200	A	□	J	□	□	NA
ME: Delta Medical Power Supply	Max Wattage in Product Series	Family Code	Output Voltage (Single Output)	Input Connector Type	Blank	B: Open Frame C: Enclosed	Delta Standard, No conformal coating
P: Open frame	200: 200 W		12 – 12V 24 – 24V 48 – 48V	J: JST connector			

### Specifications

#### Input Ratings / Characteristics

Model Number		MEP-200A12J	MEP-200A24J	MEP-200A48J
Nominal Input Voltage		100 - 240 Vac		
Input Voltage Range		90 - 264 Vac		
Nominal Input Frequency		50 - 60 Hz		
Input Frequency Range		47 - 63 Hz		
Input Current (max.)		2.5 A		
Input Surge Voltage (max.)		300 Vac for 100 ms		
Efficiency @ full load (typ.)	@ 115 Vac	92.4%	93.3%	93.8%
	@ 230 Vac	93.8%	94.7%	95.4%
Inrush Current (max.)		60 A at 264 Vac, cold start		
Earth leakage current (max.)		0.3 mA at NC, 1.0mA @ SFC*1		
Touch current (max.)		0.1 mA at NC, 0.5mA @ SFC*1		
Power Factor (min.)		0.95 at 115 V & 230 Vac / 50 Hz, full load		

\*1 NC: normal condition, SFC: single fault condition

# Medical / Industrial AC-DC Power Supply

### Mechanical

Case Chassis	Enclosed	SGCC
Case Cover	Enclosed	SGCC
Dimensions (W x L x H)	Open Frame	50.8 x 101.6 x 28.5 mm (2 x 4 x 1.12 inch)
	Enclosed	62.8 x 111.2 x 32.5 mm (2.5 x 4.4 x 1.28 inch)
Unit Weight	Open Frame	0.21 kg (0.463 lb)
	Enclosed	0.26 kg (0.573 lb)
Cooling System		Convection / Force air
Terminal	Input	JST: B2P3-VH or equivalent
	Output	JST: B6P-VH-B (LF) (SN) or equivalent

### Environment

Surrounding Air Temperature	Operating	-30 °C to +70 °C
	Storage	-40 °C to +85 °C
Temperature Power De-rating		Linear power derating from 100% load at 45 °C to 50% load at 70 °C with 2 %/°C (24 V / 48 V model) Linear power derating from 100% load at 40°C to 50% load at 70 °C with 2 %/°C (12 V model) Note: see power de-rating curves below
Operating Humidity		5-95 % RH (Non-condensing)
Operating Altitude		Up to 5,000 meters (up to 16,400 feet or 106-54kPa)
Non-Operating Altitude		Up to 5,575 meters (up to 18,290 feet or 106-50kPa)
Shock Test (Non-Operating)		50 G, 11 ms, 3 shocks for each direction
Vibration (Non-Operating)		5 – 500 Hz, 2 Grms, 15 minute for each three axis

### Convection Test Setup

Unit: mm

Notes 1 (For MEP-200A12J BNA/ MEP-200A12J CNA):

- 1.Fan source and box dimensions could be changed or modified to meet air speed: 0.99 m/s
- 2.Airflow: 6.0 CFM (For reference, air speed should meet 0.99 m/s)
- 3.Used fan voltage: 8.0 V (For reference, the voltage should be adjusted for every fan to meet air speed: 0.99 m/s)

Notes 2 (For MEP-200A24J BNA/MEP-200A48J BNA):

- 4.Fan source and box dimensions could be changed or modified to meet air speed: 0.86 m/s
- 5.Airflow: 5.2 CFM (For reference, air speed should meet 0.86 m/s)
- 6.Used fan voltage: 7.0 V (For reference, the voltage should be adjusted for every fan to meet air speed: 0.86 m/s)

Notes 3 (For MEP-200A24J CNA/MEP-200A48J CNA):

- 7.Fan source and box dimensions could be changed or modified to meet air speed: 0.86 m/s
- 8.Airflow: 5.2 CFM (For reference, air speed should meet 0.86 m/s)
- 9.Used fan voltage: 6.0 V (For reference, the voltage should be adjusted for every fan to meet air speed: 0.86 m/s)

### Protections

Overvoltage (max)		Main output 130% of rated normal voltage, latch mode
Over Load / Over Current (max)		Main output 140% of rated current, Hiccup Mode
Over Temperature		Latch mode for main output
Short Circuit		Hiccup mode (Non-latching, auto-recovery)
Protection Against Shock	Open Frame	Class I & II <sup>3)</sup>
	Enclosed	Class I & II (IEC 60601-1 certified) <sup>3)</sup>
		Class I (IEC 62368-1, IEC 60335-1, IEC 61558-1 & -2-16 certified)

\*3 applicable to Class II medical equipment which need to be evaluated in the end product assembly.

### Reliability Data

MTBF (Minimum) at 115 Vac, 170 W, 35 °C	1,000 Khrs based on Telecordia SR-332
Operating life (Minimum) at 115 Vac, 170 W, 25 °C	26,280 hrs

## 200 W Convection 2" x 4" / MEP-200A□J □NA

### Functions

#### Start-up Time

The time required for output voltage to reach 90% of its final steady state value, after the input voltage is applied.

#### Rise Time

The time required for output voltage to change from 10% to 90% of its final steady state value.

#### Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 90% of its steady state value.

Figure 4. Time Sequence

#### Dynamic Response (Main Output)

The power supply output voltage will remain within  $\pm 5\%$  of its steady state value, when subjected to a dynamic load 5% to 100% of its rated current.

##### ■ 5% to 100% Load

Figure 5-1. Dynamic Load

Figure 5-2. Dynamic Load

#### Inrush Current

Inrush current is the input current that occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

#### Overvoltage Protection

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 6 under "Protections". Power supply will latch off, and require removal/re-application of input AC voltage in order to restart.

#### Overload & Over Current Protections

The power supply's Overload (OLP) and Over current (OCP) Protections will be activated before output current under 140 % of  $I_o$  (max. load). Upon such occurrence,  $V_o$  will start to drop. Once the power supply has reached its maximum power limit, the protection will be activated and the power supply will go into "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition causing the OLP and OCP is removed and  $I_o$  is back within the specified limit.

Figure 6. Hiccup at OLP/OCP

Additionally, if the  $I_{out}$  is  $> 100\%$  for a prolong period of time (depending on the load), the Over Temperature Protection (OTP) may be activated due to high temperature on critical components. The power supply will then go into latch mode.

#### Short Circuit Protection

Output OLP/OCP function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode". The power supply will return to normal operation after the short circuit is removed.

#### Over Temperature Protection

As mentioned above, the power supply also has Over Temperature Protection (OTP). This is activated when the overload condition persists for an extended duration, and the output current is below the overload trigger point  $> 100\%$  load. In the event of a higher operating temperature condition at  $100\%$  load, the power supply will run into OTP when the surrounding air temperature is higher than the operating temperature. When activated, the output voltage will go into latch mode until the input voltage is removed; then, reapplied, and the surrounding air temperature drops to its normal operating temperature.

### Certificate

Delta has been certified as meeting the requirement of ISO 13485: 2003 and EN ISO 13485:2012 for the design and manufacture of switching power supply and adaptor for medical device.

In addition to a UL Total Certification Program (TCP) approved client laboratory for IEC60950 and IEC60065. Delta also has participated UL Client Test Data Program (CDTP) for IEC 60601

### Attention

Delta provides all information in the datasheets on an "AS IS" basis and does not offer any kind of warranty through the information for using the product. In the event of any discrepancy between the information in the catalog and datasheets, the datasheets shall prevail (please refer to [www.DeltaPSU.com](http://www.DeltaPSU.com) for the latest datasheets information). Delta shall have no liability of indemnification for any claim or action arising from any error for the provided information in the datasheets. Customer shall take its responsibility for evaluation of using the product before placing an order with Delta.

Delta reserves the right to make changes to the information described in the datasheets without notice.
