1 Product Features

- Pseudo SLC Flash with Reduced Write Amplification for High Endurance
- Dynamic and Static Wear Leveling
- Subpage Mode Flash Translation Layer (FTL)
- Optimized FW algorithms especially for high read access and long data retention applications:
  - Proven power fail management for highest reliability
  - Near Miss ECC technology
    Minimize the risk of uncorrectable bit failure over the product life time. Each read command analyzes the ECC margin level and refreshes data if necessary.
  - Read Disturb Management
    Read commands are monitored and the data is refreshed when critical numbers are reached.
  - Wear Leveling technology
    Equal wear leveling of static and dynamic data. The wear leveling assures that dynamic data as well as static data is balanced evenly across the memory. This guarantees the maximum write endurance of the device.
  - Data Care Management
    An interruptible background process controls the user data for read disturb effects or high temperature related retention degradation and refreshes data if necessary.
- Lifetime Enhancements
  - Dynamic Bad Block Remapping
  - Write Amplification Reduction
- TRIM and NCQ Support
- ATA Security Feature Set Support
- DEVSLP Compatible
- In-Field Firmware Update
- Enterprise-Grade Self-Monitoring, Analysis, and Reporting Technology (S.M.A.R.T.)
- End-to-End (E2E) Data Path Protection
- Advanced protection against radiation and soft-errors by SRAM ECC and low-alpha package
- AES-256 encryption
- TCG Opal 2.0 and secure boot feature
- On-die temperature sensor
- Life Cycle Management
- Controlled "Locked" BOM
- RoHS 6 compliance
- Swissbit Device Manager (SBDM) Tool and SDK
