Features

Enables Dante Audio to Interface with Non-Dante Analog Devices
The A130-DNT-DEC allows non-Dante audio devices, including mixers, switches, amplifiers, receivers and speakers, to smoothly interface with Dante-compatible equipment and software. The decoder supports two-channel analog transmission, both balanced and unbalanced, over a network to Dante equipment. A convenient switch lets you adjust the audio gain between +18dBu, 0dBu (default) and -10dBV.

Supports Power over Ethernet to Save You Money and Give You More Installation Choices
Because this audio decoder supports PoE, it can draw power from any connected PoE network switch, which saves you the expense and effort of purchasing, connecting and installing a separate power supply. It also gives you more flexibility in where you install the decoder, making it ideal for studios, live events and large conference areas where both network cabling and analog audio devices exist. ***Note**: The A130-DNT-DEC accepts a DC 12V power supply (not included) when a PoE switch is not available.*
