Type of Test	Test Specifications	Judgement
High Temperature Test GB2423.2-81	96 hours at +60°C ± 2°C followed by one hour in normal room temperature	SPL shall not deviate by ±3dB. Resonant frequency shall not deviate by ±50Hz. (compared with pre-test measurement)
Low Temperature Test GB2423.1-81	96 hours at -25°C ± 2°C followed by one hour in normal room temperature	
Humidity Test GB5170.18-87	96 hours at +40°C ± 2°C with relative humidity between 90% and 95% followed by 6 hours in normal room temperature	
Temperature Cycle Testing GB5170.18-87	 <p>The graph shows a temperature cycle starting at Room Temperature +25°C. It ramps up in 10 seconds to +60°C, holds for 1 hour, ramps down in 10 seconds to -25°C, and holds for 1 hour. This cycle repeats 4 times before returning to the start.</p>	SPL shall not deviate by ±4dB. Resonant frequency shall not deviate by ±80Hz. (compared with pre-test measurement)

## Measurement & Standard Reference

Abstract from GB/T 9396-1996 and IEC 268-5:1989: methods of measurement for main characteristics of loudspeakers.

### 5.1 Rated sine voltage.

A sinusoidal signal voltage specified by the manufacturer which makes the speaker work continuously in the rated frequency range, without causing electrical or mechanical damage to the speaker. The continuous voltage time is 1 hour.

### 5.2 Rated sine power.

The rated sine power corresponding with the rated sine voltage defined by:  $U_s^2/R$ , where  $U_s$  indicates the rated sin voltage and R indicates the rated impedance of the speaker.

### 5.3 Rated noise power.

The rated sine power corresponding with the rated sine voltage defined by:  $U_n^2/R$ , where  $U_n$  indicates the rated sin voltage and R indicates the rated impedance of the speaker.
