## Description

**DISCLAIMER: This product is for advanced users only. Sensor fusion use and configuration might not be plug and play and requires integration work. Check the documentation and ask questions if necessary before making your purchase.**

simpleRTK3B Fusion is a standalone board that allows to evaluate triple band RTK GNSS technology with Inertial Sensor Fusion. It's based on Unicorecomm UM981 module and is fully compatible with Arduino and STM32 Nucleo platforms, as a shield.

Good to know:

- This product is compatible but doesn't include multiband GNSS antenna, which is necessary to use the product.
- The module will not give good performance with a standard GNSS antenna, requires a multiband one.
- This product is compatible but doesn't include radio, which is necessary to connect to another base.
- This board is recommended if you want to test Unicore Communications UM981 performance.
- This product only works as rover.
- This board has the option of mounting a backup battery to speed up the Time to First Fix. Note that this will not speed up the Time to First RTK fix, fresh satellite data is needed for that. V\_BCKP will not store IMU calibration data as in other boards in the market. The module will restart calibration after every boot. If you want the board with the onboard V\_BCKP battery mounted you can add the [Hand Soldering Service](#) to your cart.

Includes:

- 1 simpleRTK3B Fusion board (UM981)

## Specifications

### UM981 features

- Millimeter level precision:
  - <1cm with a base station up to 35km
  - <1cm with NTRIP up to 35km
  - <1.2m in standalone mode
  - <0.6m standalone with SBAS coverage
- Update rate
  - Default: 1Hz
  - Maximum fusion update rate: 50Hz
- Sensor fusion
  - Tilt: 10 mm + 0.7 mm/°tilt (accuracy < 2.5 cm within 30°)
  - INS only: < 5 % of the distance travelled without GNSS signals
  - IMU RAW data: 100Hz
- Multi band: L1, L2 and L5 support, 1408 hardware channels
- Multifrequency and Multiconstellation:
  - GPS: L1C/A L1PY L2C L2PY L5
  - GLONASS: L1CA L2CA L2P L3 CDMA
  - Galileo: E1 E5a E5b E5 E6 HAS
  - BeiDou: B1I B1C B2a B2b B2I B3I
  - QZSS: L1C/A L2C L5
  - Navic: L5
  - SBAS: WAAS, EGNOS, MSAS, GAGAN, SDCM (L1)
- Start-up times:
  - Cold start: <35s
  - Warm start: <10s
  - Dynamic models: tractor, car
  - Re-acquisition: 1s
- Protocols
  - Unicore Format
  - NMEA 0183
  - RTCM v3
- Base and Rover functionality
- Operating temperature Range: -40 to +85 deg C
- Certification: CE
- Documentation: RED, RoHS

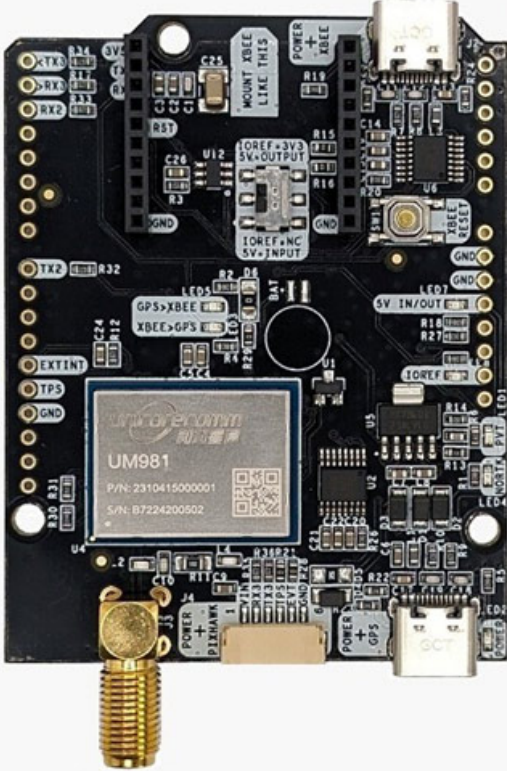

## Image Gallery

## Pinout

**TOP VIEW**

Description	Name
GPS TX3 3.3V level	TX3
GPS RX3 3.3V level	RX3
XBee TX/GPS RX2 3.3V level	RX2
XBee RX/GPS TX2 3.3V level	TX2
Event input for timestamp 3.3V level	EXTINT
Timepulse out 3.3V level	TPS
Ground	<b>GND</b>

Name	Description
<b>GND</b>	Must connect to GND
<b>GND</b>	Must connect to GND
<b>5V_IN</b>	4.5-5.5V optional input voltage Can also be 5V output via switch
<b>IOREF</b>	Can be set to 3.3V output by using the onboard switch
