1. Introduction

The DSI to HDMI Adapter is an add-on board for the Colibri iMX8 computer-on-module which uses MIPI-DSI Interface to provide a HDMI data output.

The DSI to HDMI Adapter uses Lontium Semiconductor LT8912B MIPI® DSI to HDMI bridge. It features a single-channel MIPI® D-PHY receiver front-end configuration with 4 data lanes per channel operating at 1.5Gbps per data lane and a maximum input bandwidth of 6Gbps.

The bridge provides a HDMI 1.4 standard data output with a resolution up to 60Hz 1080p 8-bit.

The DSI to HDMI Adapter can be connected to the MIPI® DSI connector of the Colibri iMX8 computer-on-module using a 30 way 0.5mm pitch FFC cable and to Colibri carrier boards which features the FFC HDMI input connector.
