

# Panel Frame

SKU:A125

## Description

The **Panel Frame** is a frame-style structural component designed for standard 5x5cm series hosts such as Core, Core2, and Tough. It is used to secure the host onto the surface of objects, offering two fixing methods: screw fastening and double-sided adhesive bonding. For Tough hosts, the included 3M waterproof double-sided tape provides an excellent waterproof barrier. For Core (Basic, Gray, Fire) hosts, the included four plastic spacers need to be inserted into the four corners of the main frame to ensure the Core host panel is flush with the Panel Frame. Users can choose the appropriate method for creating holes based on the actual surface conditions. The included dimension card makes it easy for users to mark and create holes.

## Includes

- 1 x Panel Frame
- 1 x Plastic Spacers (4 pieces included)
- 2 x Pre-cut 3M Waterproof Double-sided Tape
- 1 x Dimension Guide Card
- 4 x M3 x 16 Stainless Steel Hex Screws
- 2 x M3 x 14 Stainless Steel Hex Screws
