

Input Protected Low Noise Amplifier, 30 MHz to 3000 MHz, 1 Watt  
RF Input Power, 30 dB Gain, 1.7 dB Noise Figure, 12V, SMA

## TECHNICAL DATA SHEET

PE15A63017

The PE15A63017 is an Input Protected Low Noise RF amplifier operating across a broad octave bandwidth from 30 MHz to 3000 MHz and is rated up to 1 Watt RF input power handling. The 50 ohm design uses a PIN Diode limiter circuit on the input stage and 2 enhancement mode pHEMT transistor gain stages, along with series DC blocking capacitors on the input/output RF ports. Impressive typical performance includes 30 dB small signal gain with excellent gain flatness, 1.7 dB noise figure, and an output P1dB of +15 dBm. The amplifier requires a single +12 Vdc Supply, and has internal voltage regulation and low DC power consumption. The rugged Mil Grade aluminum package supports SMA female connectors, DC feedthru and ground pins, and has an operational temperature range of -40°C to +85°C.

### Features

- Input Protected Low Noise Amplifier
- Frequency Range 30 MHz to 3000 MHz
- 1 Watt Input Power Handling
- PIN Diode Limiter and Enhancement Mode pHEMT Semiconductor Technology
- DC Blocking Capacitors on the Input/Output RF Ports
- Small Signal Gain 30 dB typ
- Noise Figure 1.7 dB typ
- Output P1dB +15 dBm typ
- Nominal DC Voltage +12Vdc
- DC Current 80 mA typ
- 50 Ohm design
- -40°C to +85°C Operating Temperature
- SMA Female Connectors
- Rugged Mil Grade Aluminum Package Design

### Applications

- Military & Commercial Communication Systems
- Radar Systems
- Test & Measurement
- Research & Development
- RF Wideband Front Ends
- Microwave Radio Systems

### Electrical Specifications (TA = +25°C, DC Voltage = +12Vdc, DC Current = 80mA)

Description	Minimum	Typical	Maximum	Units
Frequency Range	0.03		3	GHz
Small Signal Gain	28	30	33	dB
Gain Flatness		±0.5	±1	dB
Gain Variance at OTR*		±1.25		dB
Output at 1 dB Compression Point	+13	+15		dBm
Output 3rd Intercept Point	+24	+28		dBm
Noise Figure		1.7	2	dB
Input VSWR		1.5:1	1.75:1	
Output VSWR		1.5:1	1.75:1	
Reverse Isolation	40	45		dB
Spurious			-70	dBc
Input Power (CW)			+30	dBm
Operating DC Voltage	+10	+12	+13	Volts
Operating DC Current	65	80	95	mA
Operating Temperature Range	-40		+85	°C

### Amplifier Power-up Precautions

- 1.) Confirm that proper ESD precautions and controls are always in place before handling any Amplifier module.
- 2.) Confirm adequate thermal management is in place to effectively dissipate heat away from the Amplifier package. The Amplifier operational baseplate temperature must be within the operational temperature range stated in the Amplifier datasheet. Depending on the design and thermal requirements, using a heatsink with cooling fan is always recommended for safe reliable operation. A heat sink without a cooling fan may also be used. Damage caused from overheating will void the warranty.
- 3.) Confirm adequate system grounding is established. The DC power supply and Amplifier must have a common ground in order to operate properly.
- 4.) Power Amplifiers may require additional DC Current when initially powered-up. Depending on the design, the input current draw could range from an additional 10% to 100% above the maximum rated DC current of the Amplifier. This varies based on product part number.
- 5.) Confirm the DC power supply, if limited, is set to allow for additional start-up current that's rated for the Power Amplifier.
- 6.) Confirm the system is designed and calibrated for 50 ohms. Any impedance mismatch may cause performance issues.
- 7.) Perform a CALIBRATION (if required) with the loads before connecting the Amplifier to the Network Analyzer to ensure proper performance.
- 8.) Use a fixed attenuator between the signal source and input port of the Amplifier to optimize the input VSWR match.
- 9.) Confirm the input power level at the input port of the amplifier does not exceed the maximum rated limit for input power (as stated in the Amplifier datasheet).  
 $P_{in}$  for Small Signal Gain = P1dB-SSG-10 dB  
 $P_{in}$  for P1dB = P1dB-SSG+1 dB
- 10.) Confirm the Network Analyzer is always connected to the Amplifier first before DC power is applied to the Amplifier.
- 11.) As long as the input and output ports of the amplifier are connected to a 50Ohm load and RF signal power is applied, the Amplifier can be powered up with DC voltage.
- 12.) Confirm the Amplifier output load is matched for a 50 Ohm impedance and will not exceed the maximum rated VSWR or Return Loss limit for the Amplifier. Exceeding the maximum rated VSWR or Return Loss limit will result in reflected signal power that could damage the Amplifier and void the warranty.
- 13.) **Power Amplifier connected to an Antenna for signal transmission** - It's strongly recommended to use a high power fixed attenuator pad or an Isolator between the output port of the Amplifier and input port to the antenna. Any reflected signal power due to impedance mismatch will likely damage the Amplifier and void the warranty.
- 14.) The attenuator or isolator used at the output port of the Amplifier must be rated to handle the output power level and operational frequency band of the amplifier.
