FN7110

Double Range Load Cell

SPECIFICATIONS

- ◆ Double S-Beam Load Cell
- ◆ 10/100 N to 1k/10k N (2/20 lbf to 200/2k lbf)
- ◆ High resolution
- ◆ For compression and traction uses

The **FN7110** features high accuracy measurement channels in two ranges in the same load cell.

The standard ratio between the ranges is 1 to 10, and standard load range combinations go from 0-10 and 0-100 N through 0-1000 and 0-10,000 N. The **FN7110's** percentage accuracy is the same over each range in the load cell. In practice one maintains accuracy of 0.1% over the high force range even in the first 10% of the range.

During measurement, once the lower range sensing element reaches its designed full scale limit, mechanical stops protect it against overloads, in tension and compression, up to 12 times the full scale limit of the higher range sensing element (which is equivalent to 12 times the full scale limit of the lower range). For high-level output, a model with an integrated amplifier is available.

On request, Instruction documents can be provided to ease the selection and use of our sensors and provide helpful tips.
