

Distributed Low Noise Amplifier

2 - 20 GHz

MAAL-011182-DIE

Rev. V3

Features

- 15 dB Gain
- 2.5 dB Noise Figure
- 25 dBm Output IP3
- 5 V Drain Supply
- Bare Die: 3044 x 1304 x 100 μm
- RoHS* Compliant

Applications

- ISM / Multi Market
- Test & Measurement

Description

The MAAL-011182-DIE is a wideband distributed low noise amplifier with an operating frequency range of 2 to 20 GHz. This LNA has a 2.5 dB typical noise figure, 15 dB typical gain, and a 25 dBm typical output IP3. The output P1dB is 14 dBm typical with a 26 dBm typical P3dB. This LNA is biased with a single 5 V supply. The typical current draw is 65 mA.

No external matching components are required. There are internal DC blocking capacitors at the input and output pins.

The MAAL-011182-DIE is designed for wideband low noise applications such as test equipment. It is available as a bare die. This LNA is also available in a 5 mm, 32 lead PQFN package under part number MAAL-011182.

Functional Schematic

Pad Configuration^{1,2}

Pad #	Pad Name	Description
1,3,4,6,8,10	GND	Ground
2	RF _{IN}	RF Input
5	V _{DD}	Voltage Supply
7	RF _{OUT}	RF Output
9, 11	N/C	No Connection

1. Backside of die must be connected to RF, DC, and thermal ground.
2. It is not necessary to connect ground pads. Via holes connect these pads to the backside ground.

Ordering Information

Part Number	Package
MAAL-011182-DIE	Bare Die
MAAL-011182-DIESMB	Sample Board

* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

Distributed Low Noise Amplifier

Maximum Operating Conditions

Parameter	Maximum
TX Input Power	6 dBm
Operating Voltage	6 V
Junction Temperature ^{3,4}	+160°C
Operating Temperature	-40°C to +85°C

3. Operating at nominal conditions with $T_J \leq +160^\circ\text{C}$ will ensure $\text{MTTF} > 1 \times 10^6$ hours.

4. TX Junction Temp. (T_J) = $T_C + \Theta_{jc} * ((V * I) - (P_{OUT} - P_{IN}))$.
Typical TX thermal resistance (Θ_{jc}) = 86.2°C/W.

a) For $T_C = +85^\circ\text{C}$,
 $T_J = 113^\circ\text{C}$ @ 5 V, 65 mA

Absolute Maximum Ratings^{5,6}

Parameter	Absolute Maximum
TX Input Power	25 dBm
VDD	7 V
Junction Temperature ⁷	+180°C
Storage Temperature	-55°C to +150°C

5. Exceeding any one or combination of these limits may cause permanent damage to this device.

6. MACOM does not recommend sustained operation near these survivability limits.

7. Junction temperature directly effects device MTTF. Junction temperature should be kept as low as possible to maximize lifetime.

Recommended Bonding Diagram⁸

8. The 50 Ω probe stand-offs are for engineering test only. It is not necessary to wirebond the GSG ground pads 1,3,6 and 8 to ground as they are already connected to ground through backside vias.

Die Attachment

This product is manufactured from 0.100 mm (0.004”) thick GaAs substrate and has vias through to the backside to enable grounding to the circuit.

Recommended conductive epoxy is Namics Unimec XH9890-6. Epoxy should be applied and cured in accordance with the manufacturer’s specifications and should avoid contact with the top of the die.

Parts List

Part #	Value	Case Style
C1	100 pF	0402
C2	1000 pF	0603

Die Outline^{9,10,11,12}

9. Unless otherwise specified, all dimensions shown are μm with a tolerance of $\pm 5 \mu\text{m}$.
10. Die thickness is $100 \pm 10 \mu\text{m}$.
11. Bond pad/backside metallization: Gold.
12. Die size reflects cut dimensions. Saw or laser kerf reduces die size $\sim 25 \mu\text{m}$ each dimension.

Bond Pad Dimensions (μm)

Pad #	X	Y
1,3,6,8	70	85
2,7	75	150
4,9,10	75	75
5	218	75
11	65	65

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1A devices.
