Description

The MAAM-011361 is a wideband high linearity driver amplifier packaged in a compact 3 mm 16-Lead SMT package. This driver amplifier provides 35 dB gain, 26 dBm OP1dB, and 40 dBm OIP3 with 160 mA quiescent current and device ON/OFF function to support TDD system applications. RF input and output ports are internally matched over the entire operating frequency range of 3.0 - 4.4 GHz. The frequency range of 4.3 - 4.7 GHz can be supported by changing external SMT component.

Pin Description

Pin #	Name	Description
1, 9, 12	GND	These pins are grounded internally.
2	RFIN	RF input. Internally DC blocked.
3, 6 - 8, 15	NC	No connection. Can be connected to ground. Not connected internally.
4	VCC1	DC supply voltage. Place bypass capacitor as close to pin as possible.
5	NC	No connection. Can be connected to ground. Grounded internally.
10, 11	RFOUT/ VCC2	RF output. DC bias current is injected through these two pins. Supply voltage through a choke coil. DC-blocking capacitor is required following the choke coil. Place bypass capacitor as close to the choke coil as possible.
13	VBIAS1	DC supply voltage for Bias Circuit. Place bypass capacitor as close to pin as possible. VBIAS1 should be connected to VCC1 and VCC2 single supply.
14	VBIAS2	No connection. Leave open (floating).
16	STBY	Supply amplifier ON/OFF logic control voltage.
17	Paddle	Must be connected to RF, DC, and thermal ground. This pin is grounded internally.

8. Exceeding any one or combination of these limits may cause permanent damage to this device.

9. MACOM does not recommend sustained operation near these survivability limits.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1B and CDM Class C3 devices.
