

GWconnect® Modular System has been created to fulfill the needs of the Heavy Duty Connectors end users, who now can design and assemble their own connector according to their specific requirements.

The GWconnect Modular System is made of a support frame and a mobile element to block the modular inserts. Specific holes in the support frame allows the insertion of single and double modules, and the mobile element allows a steady fastening of the modules with a lateral scrolling. Captive screws allow the modular connector to become a monoblock structure resistant to impacts and vibrations, and resistant to compression and traction when coupling male and female inserts.

The GWconnect Modular System is the only one which is intermateable with the market leader and it is compatible with all the Heavy Duty Connector enclosures and DIN rail supports. It is available in frame size 10A, 6B, 10B, 16B, 24B 32B (2x16B) and 48B (2x24B). The large selection of available modular inserts is constantly expanded, the end user can combine modules for power, signal and pneumatic for air and liquids.

Modular solutions for your needs!
