Rectangular Near Field Communication (NFC) Antenna

NFC Antenna, with or without Ferrite

molex

Rectangular NFC Antennas maximize effectiveness of quick, two-way read/write operations over a wide range of detection distances from metallic and non-metallic substrate applications

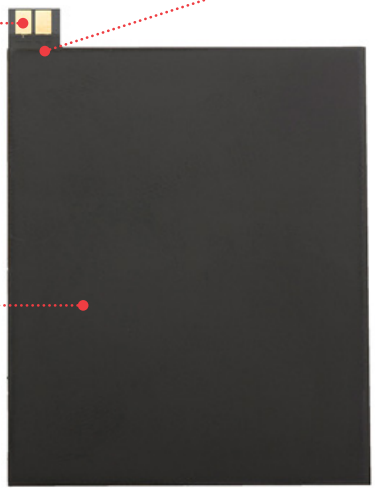
Near Field Communication (NFC) Antennas optimize detection performance for both Ferrite and non-Ferrite based applications

Features and Benefits

Plated Pads
Provide electrical contact to connecting spring clips or pogo pins mounted on the application PCB

Flexi material
Facilitates easy integration on the application substrate due to its pliability

Selection of antenna sizes (mm): (15 by 15), (15 by 25), (23 by 27), (34 by 46) and (45 by 55)
Offer increased design flexibility to the application developer



Standard NFC Antenna

Ferrite* layer
Eliminates interference effects from metallic or conductive surfaces when antenna is applied on these (Remark: Non-Ferrite version antennas are used on non-metallic or non-conductive surfaces)

Double-sided adhesive tape with liner(not shown, on underside of antenna)
Enables easy peel-and-stick mounting on the application substrate
