CFM260S Series

Application Note V10

1. Introduction

This application note describes the features and functions of Cincon's CFM260S series of open frame, switching AC-DC power module. These are highly efficient, reliable, compact, high power density, single output AC/DC power modules. The module is fully protected against short circuit and over-voltage conditions. Cincon's world class automated manufacturing methods, together with an extensive testing and qualification program, ensure that the CFM260S series power module is extremely reliable.

3. Main Features and Functions

3.1 Operating Temperature Range

The highly efficient design of Cincon's CFM260S series power modules has resulted in their ability to operate within ambient temperature environments from -30°C to 80°C. Due consideration must be given to the de-rating curves when ascertaining the maximum power that can be drawn from the module. The maximum power which can be drawn is influenced by a number of factors, such as

- Input voltage range
- Permissible Output load (per derating curve)
- Effective heat sinks

3.2 Output Protection (Over Current Protection)

The power modules provide full continuous short-circuit protection. The unit will auto recover once the short circuit is removed. To provide protection in a fault condition, the unit is equipped with internal over-current protection. The unit will operate normally once the fault condition is removed. The power module will go to hiccup mode if the output current is set from 130% to 180% of rated current.

4. Applications

4.1 Test Set-Up

The basic test set-up to measure parameters such as efficiency and load regulation is shown in Figure 1. When testing the Cincon's CFM260S series under any transient conditions, please ensure that the transient response of the source is sufficient to power the equipment under test. We can calculate the

- Efficiency
- Load regulation and line regulation.

The value of efficiency is defined as:

$$\eta = \frac{V_o \times I_o}{P_{in}} \times 100\%$$

Where:

V_o is output voltage
 I_o is output current
 P_{in} is input power

The value of load regulation is defined as:

$$\text{Load reg.} = \frac{V_{FL} - V_{NL}}{V_{NL}} \times 100\%$$

Where:

V_{FL} is the output voltage at full load

V_{NL} is the output voltage at 10% load

The value of line regulation is defined as:

$$\text{Line reg.} = \frac{V_{HL} - V_{LL}}{V_{LL}} \times 100\%$$

Where:

V_{HL} is the output voltage of maximum input voltage at full load.

V_{LL} is the output voltage of minimum input voltage at full load.

Figure 1. CFM260S Series Test Setup

4.2 Output Ripple and Noise Measurement

The test set-up for noise and ripple measurements is shown in Figure 2. Measured method:

Add a 0.1uF ceramic capacitor and a 10uF electrolytic capacitor to output at 20 MHz Band Width

Figure 2. Output Voltage Ripple and Noise Measurement Set-Up

4.3 Installation Instruction

The CFM260S series has four 3.2mm diameter mounting holes. There are three type installations for CFM260S. Please use the mounting holes as follows: Insert the spacer (5.5mm diameter max.) of 5mm height or more to mount the unit.

CFM260S Series

Application Note V10

CFM260SXXX Installation Diagram

Note: M3 screw head and washer diameter shall not exceed 5.5mm.

The CFM260S series provide the baseplate cooling for customer to increasing heat dissipation. Please refer to the following figure for installation.

CFM260SXXX installation diagram

Note: M4 screw head and washer diameter shall not exceed 5.5mm.

CFM260SXXXC installation diagram

Note: M3&M4 screw head and washer diameter shall not exceed 5.5mm

Please allow 4mm side clearance from the components and all side of the PCB. Allow 5mm clearance above the highest parts on the PCB. Be especially careful to allow 5mm between the solder side of the PCB and the mounting surface. If the clearances are not sufficient the specifications for isolation and withstand will not be valid.

FG should be connected to the earth (ground) terminal of the apparatus. If not the conducted noise and output noise will increase.

4.4 EMI Test

The CFM260s series Conductive EMI meets EN55032 Class B when test condition is Class I

Radiation meet EN55032 Class B when test condition is Class I.

4.5 Mating Connectors

AC Input (CN1)	Wafer: TAIWAN KING PIN TERMINAL PVHI series or equivalent. Housing: JST VHR series or equivalent.
DC Output (CN2)	Wafer (for 240,360,480): TAIWAN KING PIN terminal PVHI series or equivalent. Housing: JST VHR series or equivalent. M3 screw (only for 120) mate with round terminal. (Note: Round terminal of the max outer diameter is 6.75mm, max inner diameter is 3.9mm.)
Fan Output (CN3)	Wafer: Chyao shiunn JS-6001 series or equivalent. Housing: Chyao shiunn Housing JS-8001 series or equivalent.
LED	indicates that the power is on.
VR	Phillips screwdriver

5. Packing Information

The packing information for CFM260SXXX series is showing as follows:

ITEM	PART NO.	NAME	OUTSIDE DIM(mm)	PCS
1	-	CFM260SXXX Product	101.6x50.8x36.6	20
2	G64301170	Antistatic Foam	340x245x50	2
3	G64308319	Antistatic Foam	340x245x15	2
4	G64112339	No.59 Cardboard Box	360.6x257.6x148.5	1

Each Box Packaging 20 PCS Products
Gross weight Ref. 5.6 Kg

The packing information for CFM260SXXXB series is showing as follows:

ITEM	PART NO.	NAME	OUTSIDE DIM(mm)	PCS
1	-	CFM260SXXXB Product	116.8x50.8x38.6	20
2	G64301206	Antistatic Foam	390x295x50	2
3	G64301207	Antistatic Foam	390x295x15	2
4	G64112284	No.106 Cardboard Box	412.1x309.1x148.5	1

Each Box Packaging 20 PCS Products
Gross weight Ref. 6.4 Kg

CFM260S Series

Application Note V10

The packing information for CFM260SXXXC series is showing as follows:

ITEM	PART NO.	NAME	OUTSIDE DIM(mm)	PCS
1	-	CFM260SXXXC Product	116.8x64x40.5	12
2	G64301171	Antistatic Foam	340x245x50	2
3	G64308319	Antistatic Foam	340x245x15	2
4	G64112339	No.59 Cardboard Box	360.6x257.6x148.5	1

Each Box Packaging 12 PCS Products
Gross weight Ref. 5 Kg
