## **UPDATE March 20, 2020**

MACOM continues to closely monitor the public health outbreak linked to the COVID-19 virus and the effect it will have on our business. ***Currently All of our MACOM production facilities are in operation.***

MACOM has a very broad portfolio of products based on different technologies, production processes, form factors and functions. To support this portfolio MACOM has deployed a complex and diversified supply chain. Our response to supply interruptions will vary greatly depending on what part of our portfolio or supply chain is impacted.

**California:** Due to the recent “Executive Order N-33-20” directive in California, MACOM has directed certain employees to work from home, however critical operations continue at each site. Because of the nature of our operations in the area, we do not expect this will have a material impact on our production or delivery schedules.

**Malaysia:** Due to the “Comprehensive Restrictions” enacted by the Malaysian government, production at our assembly and test partners has been impacted. The duration and the scale of the impact is currently uncertain until March 31<sup>st</sup>, 2020.

**Philippines:** Due to the “Comprehensive Restrictions” enacted by the Philippine government, we have confirmed that our key supply chain partners have suspended operations until April 12<sup>th</sup>, 2020.

***We are currently working to assess the impact on our production and delivery schedules, and plan to have refreshed our delivery dates by close of business, Friday March 20<sup>th</sup>.***

MACOM is gradually moving our non-production employees to a work from home posture. All of our MACOM production facilities are operating without major disruptions.

MACOM will continue to monitor the situation and will provide updates when the situation changes as it relates to our business.
