

CryptoAuthentication™ Crypto Elements with Hardware-Based Key Storage

Evaluation, Development, and Production Kit Selection Guide

Kits for Every Stage

Atmel® provides kits to assist evaluators and developers through every stage of the design process—from evaluation all the way to small-run production. All Atmel crypto kits run ACES (Atmel CryptoAuthentication Evaluation System) software to configure the Atmel CryptoAuthentication devices. The combination of user-friendly hardware and software offers users exactly what they need throughout evaluation, development, and production.

It All Starts with a Evaluation Kit

The Atmel AT88CK490 evaluation kit contains three devices: the ATSHA204A, ATECC108A, and ATAES132A. The ATECC508A replaces the ATECC108A on the AT88CK590 kit (red board). These kits allow users to run ACES software to configure and evaluate the operation of any of the three crypto devices on the kit boards. Once users get a feel for the operation and performance of the devices, they can easily use the next tool in the flow.

The Next Step—the AT88CK101 or the CryptoAuth Xplained Pro Development Kit

The Atmel AT88CK101 is a socketed kit that allows the developer to program CryptoAuthentication devices and then install those devices in their system. Versions that support the various device package types are available. Another development kit option is the CryptoAuth Xplained Pro, which is a standard 20-pin daughterboard that instantly adds CryptoAuthentication devices to the Atmel Xplained and Xplained Pro development environment boards.

CryptoAuth Xplained Pro

AT88CK9000

Just press the big yellow button to program five devices at the same time.

AT88CK9000 Secure Personalization Kit (Option)

The Atmel AT88CK9000 allows programming of small device batches of device quickly, easily, and cost-effectively. This option decreases the cycle times of prototype, pre-production, and lower-volume production, improving time to market. The AT88CK900 securely programs up to five devices at the same time. Running production is literally as easy as pressing a button.
