

Portable 10-Channel Data Recorder

Model DAS220-BAT

The DAS220-BAT measures and records parameters commonly found in process applications including voltage, temperature, current, resistance, frequency, and pulse. It includes 10 universal integrated analog channels with convenient screw input terminals. This recorder was developed by B&K Precision's subsidiary Sefram in France, which specializes in the design and manufacture of data acquisition instruments, field strength meters, and other test and measurement instruments.

Measurement results are viewed graphically and numerically on a 10-inch color touchscreen and saved to internal memory or external USB memory. Icon-driven menus make the instrument easy to navigate. The free DasLab Windows PC software allows users to remotely control and configure the recorder, transfer logging results and configuration files, and view live data in graphical or numerical format on the PC.

The data recorder features 32 GB of solid-state memory for data logging over extended periods. The internal battery provides back-up in the event of power loss.

Applications

- Temperature logging with thermocouples and platinum resistance temperature sensors
- Voltage measurements down to ± 0.5 mV range

DasLab software

DasLab file management

DasLab remote setup

DasLab is a license-free Windows compatible software that can be downloaded from www.bkprecision.com. The software controls the recorder through the LAN interface and provides the following features:

- Channel and trigger configuration
- Display live measurement results in graphical or numerical format
- File management, file upload and download of data recordings, screen captures and configuration files

Virtual Network Computing (VNC) capability

The recorder's built-in VNC capability, based on the Remote Frame Buffer protocol (RFB), provides a graphical desktop sharing system to remotely control the instrument from another computer. VNC is platform independent and provides a means to control all functions of the instrument through a graphical interface replicating the instrument's front panel using a mouse and keyboard.

Optional accessories

The 50 Ω shunt can be used on any channel of the DAS220-BAT to accurately measure, display, and record the output from 4 to 20 mA current loop sensors.

Rugged carrying case

Analog input connectors 10 pack

Logic channels patch cord
