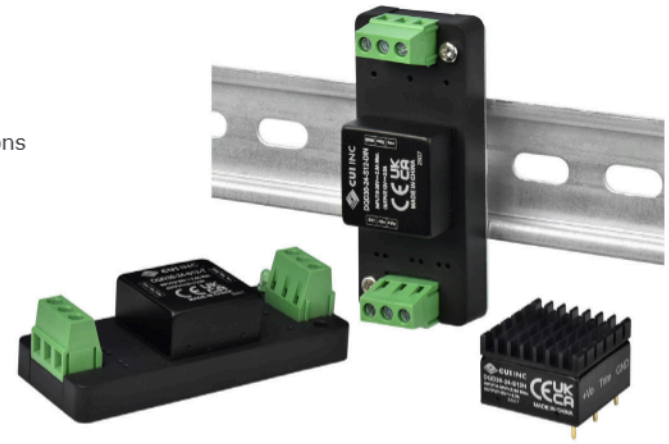
SERIES: DQD30 | DESCRIPTION: DC-DC CONVERTER

FEATURES

- up to 30 W isolated output
- single regulated outputs
- over voltage, input under voltage, short circuit, and over current protections
- remote on/off control
- 1,500 Vdc isolation
- -40 ~ 105°C temperature range, with derating
- certified to IEC/EN 62368-1
- PCB, chassis and DIN-rail mount options



RoHS CE UKCA

Notes:
1. The ripple and noise is measured at 0%~100% load and 20MHz bandwidth.
2. The efficiency is tested at full load.
3. Unless otherwise specified, all values or indicators in this manual are tested at Ta=25°C, humidity<75%RH, rated input voltage and rated load (pure resistance load).

RIPPLE AND NOISE TEST INSTRUCTION

Ripple & Noise Test Procedure

1. Test Equipment Configuration
   - Cable Arrangement: Position test cables in parallel to minimize inductive effects.
   - Oscilloscope Settings: Select Sample Mode operation.
     Limit bandwidth to 20 MHz to reduce high-frequency noise interference.
     Utilize a 100 MHz bandwidth probe with the probe cap and ground lead removed for optimal signal fidelity.
   - Probe Compensation: Connect a 0.1 µF polypropylene capacitor (C1) and a 10 µF high-frequency, low-ESR electrolytic capacitor (C2) in parallel with the probe to filter transient disturbances.
2. Ripple & Noise Measurement Setup
   - Module Connection: Connect the module input to a regulated power source.
     Connect the module output to an electronic load via an appropriate test fixture.
   - Measurement Technique: Measure output voltage directly from the module's output pins using a dedicated sampling lead.
     Employ insulated power cables with an AWG rating suitable for the specified output current to ensure safety and accuracy.

Application Reference

1. Maximum Capacitive Load: Determined under pure resistive, full-load conditions for accurate assessment.
2. Technical Support: Bel offers comprehensive power solutions and custom product designs.
