EV05W0505B-YE-00A

5V, 0.5W, Regulated, 3kV$_{RMS}$ Isolated DC/DC Module Evaluation Board

DESCRIPTION

The EV05W0505B-YE-00A is an evaluation board designed to demonstrate the capabilities of the MIE05W0505BGYE, an isolated, regulated DC/DC module. It can support 3V to 5.5V input voltage (V_{IN}) applications. The MIE05W0505BGYE has excellent load regulation, line regulation, and supports up to 0.5W of output power (P_{OUT}).

The MIE05W0505BGYE uses capacitive isolation technology for the feedback block, which can regulate the output voltage (V_{OUT}) without a traditional optocoupler and precision-configurable reference IC. This module is a small solution that provides highly reliable operation when compared to traditional isolation power modules.

The MIE05W0505BGYE features continuous short-circuit protection (SCP) and over-temperature protection (OTP). It is available in a small SOIC-8 wide body (WB) package.

It is recommended to read the datasheet for the MIE05W0505BGYE prior to making any changes to the EV05W0505B-YE-00A.

QUICK START GUIDE

The board's output voltage is set to 5V by default. To quick start the EV05W0505B-YE-00A, refer to Figure 1 and follow the steps below:

1. Preset the power supply (V_{IN}) to be 4.5V ≤ V_{IN} ≤ 5.5V.

2. Turn off the power supply.

3. Connect the power supply terminals to:

    a. Positive (+): VIN

    b. Negative (-): GND1

4. Connect the load terminals to:

    a. Positive (+): VOUT

    b. Negative (-): GND2

5. After making the connections, turn on the power supply. The board should automatically start up.

6. To use the enable function, apply a digital input to the EN pin. Drive EN above 2V to turn on the EV05W0505B-YE-00A; drive EN below 0.4V to turn it off.

7. Set the output voltage (V_{OUT}) to 3.3V by moving the jumper from the 5V selection to the 3.3V selection on CN1. VIN should start up.
