

Product Overview

NIS6452: Electronic Fuse, +3.3 V, +5 V

For complete documentation, see the data sheet.

The NIS64x2 is a cost effective, re-settable fuse which can greatly enhance the reliability of a hard drive or other circuit from both catastrophic and shutdown failures. It is designed to buffer the load device from excessive input voltage which can damage sensitive circuits and to protect the input side circuitry from reverse currents. It includes an over-voltage clamp circuit that limits the output voltage during transients but does not shut the unit down, thereby allowing the load circuit to continue its operation.

Features

- Fast Response Overvoltage Clamp Circuit
- 46 mΩ Typical
- Digital and Tristate Enable
- Integrated Reverse Current Protection
- Thermally Protected
- Integrated Soft-Start Circuit
- Internal Undervoltage Lockout Circuit

Applications

- Hard Drives
- Solid State Drives
- Mother Boards

Benefits

- Limits the output voltage during transients but does not shut the unit down, thereby allowing the load circuit to continue its operation.

End Products

- Hard Drives and Solid State Drives

Part Electrical Specifications									
Product	Pricing (\$/Unit)	Compliance	Status	Type	V _I Max (V)	r _{DS(on)} Max (mΩ)	T _{SD} Typ (°C)	T _{hyst} Typ (°C)	Package Type
NIS6432MT1TWG	0.3929	Pb-free Halide free	NEW	Latch	14	60	150	25	WQFN-12
NIS6432MT2TWG	0.3929	Pb-free Halide free	NEW	Auto-Retry	14	60	150	25	WQFN-12
