

SPRING-ACTION
PROTECTIVE
COVERS

Dust, spray and immersion protection solutions plus full environmental (water jet) protected designs

High-performance military and commercial interconnect applications employ protective covers to seal unmated receptacles from sand, dust, and fluid ingress, as well as other forms of environmental and mechanical damage. ProSeal environmental protective covers are mounted directly to panels and electronic equipment housings to enhance the reliability and foolproof performance of military/aerospace connectors. Spring-action ProSeal protective covers are available for every military QPL and Glenair signature connector series, and are supplied in two styles for dust, spray, and fluid immersion protection as well as full environmental (water jet) configurations.

- Anti-vibration and shock spring-action solution
- Dust-tight, spray and fluid immersion protected designs with self-aligning environmental seals
- Full environmental (threaded or twist-lock) configurations
- Lock in open position or automatic closure
- Compatible with a broad range of military standard / aerospace connectors including D38999 Series I, II, III; Mighty Mouse Series 801, 804, 805, and 806; MIL-DTL-24308 and more
