## Description

SparkFun micro:climate kit for micro:bit - v3.0 is a full weather station kit that is built on top of the weather:bit carrier board. The kit is Qwiic enabled and includes the tried-and-true weather meters and soil moisture sensor. Whether the user is an agriculturalist, professional meteorologist, or hobbyist, they will be able to build high-grade weather stations powered by micro:bit. The users can even talk via wireless communication between two micro:bits. The kit can monitor the weather without being exposed to it.

Inside each micro:climate kit the users will find all the components required to build micro:bit into a go-to weather sensor. The only parts not included are two AAA batteries, microSD card, and the micro:bit itself. Simply add the micro:bit to the provided weather:bit, assemble the kit, and you will be ready to start sensing. The SparkFun micro:climate kit is a great way to get your feet wet in high-grade sensors.

## Kit Contents
