Description

CCS Touch Display 4.3" Development Kit is used to develop a GUI using the graphics and touch library. The kit is powered by a PIC24EP512GU810 microcontroller and comes with a 4.3" 480 x 272 TFT display with a resistive touch screen. The board features a 256MB flash and stores hundreds of 480 x 272 images and custom fonts.

The touch display 4.3" development kit includes a software IDE to draw out a GUI and the C library for drawing graphics and handling touch. A USB connection and eight digital I/O pins are used for external inputs and outputs. The kit comes with onboard programming capabilities, and no device programmer is required.

Kit Contents

- 9V AC adapter and cables
- Development tools CD with GUI interface and CCSLoad software
- Exercise book
- In-circuit debugger/programmer
- Touch display 4.3 prototyping Board
