

MICRO-FIT+ VERSA CONNECTORS

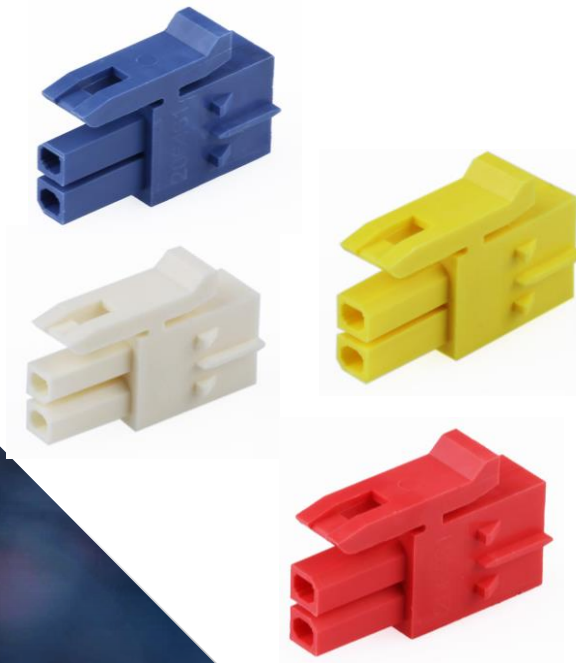

Adding four different colors-natural, blue, red and yellow-to avoid mis-mating, which can cause terminal damage and production inefficiencies. OEMs are often challenged in the assembly process with accurately selecting mating connectors. This leads to overall increased assembly time due to errors and rejection rates. Micro-Fit+ Versa Connectors help design engineers and operators quickly identify connectors for production efficiency and operational safety.

VITAL PRODUCT INFORMATION

High Current in a Small Package

Industries are challenged by space constraints in their applications. The Micro-Fit Plus Connector has a smaller PCB footprint, using less space than the Micro-Fit 3.0. Micro-Fit+ Connectors will provide space-saving opportunities for industries to meet their design requirements.

Design Flexibility

Micro-Fit+ Versa is offered in 4 different colors - natural, blue, red, yellow- along with currently available Black colored options. All colors have unique polarizations and can not be mis-mated. This allows harness makers to ensure operational safety and ease of connector mating in harnesses with multiple connectors at the same location.

Glow Wire Capable

Micro-Fit Plus Connectors contain a V-0/Glow Wire combination resin which reduces the cost of materials and labor, by providing less items on a bill of materials. These connectors also allow customers to meet the European standard for electrical requirements.
