

Pumpkin i500 Board Reference Guide

The purpose of this document is to give an overview of all the hardware items on the i500 Pumpkin Board.

The Top of the Pumpkin i500:

The top of the board looks like the following picture

The Type-C Power input connector is non-standard, in that it supports wide-input voltage. You can supply anywhere from 5V up to 18V into the Type-C connector to power the Pumpkin i500.

The 40-Pin Raspberry PI Compatible Connector has the following pinout. You 5V rail on this connection is output-only. Unlike a Raspberry PI, you cannot back-power the board by putting 5V on the 5V pins. You must only power the board via the Type-C power only input.

Pumpkin i500									
Ball Location	PAD	GPIO	MUX						
AF4	PAD_SDA1	81		3.3V	1	2	5.0V		
AE4	PAD_SCL1	84		I2C1_SDA	3	4	5.0V		
R25	PAD_PERIPHERAL_EN0	150		I2C1_SCL	5	6	GND		
				GPIO150	7	8	UART1_TXD	115	PAD_CONN_BT_CLK
				GND	9	10	UART1_RXD	121	PAD_CONN_HRST_B
AD20	I2S1_MCK	173	TDM_DATA2	I2S1_MCLK	11	12	I2S1_BCK	170	PAD_I2S1_BCK
M22	PAD_PERIPHERAL_EN2	152		GPIO152	13	14	GND		
AE3	PAD_KPCOL1	94	SPI2_M0	GPIO94	15	16	GPIO165		
				3.3V	17	18	GPIO1	165	PAD_PERIPHERAL_EN4
Y22	PAD_SPI1_M0	163		SPI1_MOSI	19	20	GND	1	PAD_EINT1
W22	PAD_SPI1_M1	161		SPI1_MISO	21	22	GPIO2		
AA22	PAD_SPI1_CLK	164		SPI1_CLK	23	24	SPI1_CSB	2	PAD_EINT2
				GND	25	26	GPIO0	162	SPI1_A_CSB
AC5	PAD_SDA0	82		I2C0_SDA	27	28	I2C0_SCL	0	PAD_EINT0
Y5	PAD_CAM_PDN1	98		I2S2_BCK	29	30	GND	83	PAD_SCL0
P26	PAD_SDA6	12		I2S2_D12	31	32	I2S2_MCK		
AA3	PAD_CAM_RST0	101		I2S2_LRCK	33	34	GND	97	PAD_CAM_PDN0
AD21	PAD_I2S1_LRCK	171	TDM_DATA0	I2S1_LRCK	35	36	GPIO151		
AD25	PAD_PERIPHERAL_EN5	169	TDM_BCK	PWM_C	37	38	I2S2_DIN	151	PERIPHERAL_EN1
				GND	39	40	I2S1_DO	174	PAD_I2S2_DI
							TDM_DATA1	172	PAD_I2S1_DO

Per the board programming instructions document, you can plug a computer into the Type-C data port and flash the board. When you have the Type-C data port attached it will appear as fastboot peripheral and fastboot can be used to program the board. The i500 processor only has one USB port on it. There is a Microchip LAN9512 chip on the board which provides a USB hub + Ethernet much like the original Raspberry Pi 3B. In order to give direct access to the USB port on the i500 chip during programming, the USB-C data port is connected to the i500 via a MUX that switches when plugged into, thus

disconnecting the hub. So, you can either have the LAN9512 connected to the i500, OR the direct USB-C data connection, but not both at the same time.

Pumpkin Display Connector:

The Pumpkin MIPI-DSI Display connector is located at CN2 on the bottom of the board. The following is the pinout of the connection and the type of connector used. All the logic on this connector is 1.8V logic, even though there are other power rails available on this connector for communicating with the display.

PUMPKIN i500 DSI/Display CONNECTOR PIN-OUT MAP

Shielded DF40 48-pin			
DF40GB(3.0)-48DS-0.4V

I2C3_SCL	29	30	DSI_D2_N
GND	31	32	GND
GND	33	34	GND
DSI_D0_P	35	36	DSI_D1_P
DSI_D0_N	37	38	DSI_D1_N
	39	40	GND
	41	42	DISP_PWM
I2C45_SDA	43	44	DSI_TE
I2C5_SCL	45	46	DISP_RST
TOUCH_INT	47	48	TOUCH_RST

The display GPIO mappings to GPIO on the i500 processor are as follows:

DISPLAY_GPIO0 = GPIO158

DISPLAY_GPIO1 = GPIO159

DISPLAY_GPIO2 = GPIO153

Pumpkin i500 Camera Ports:

The Pumpkin i500 has two camera connectors used to bring out all the camera connections from the i500 processor. The i500 has two 2-Lane MIPI ports and two 4-Lane MIPI ports.
