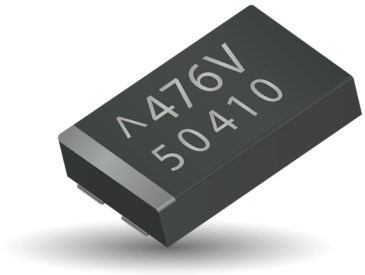
TCN Series

Highest CV/CC Conductive Polymer Chip Capacitors Undertab



FEATURES

- Highest CV/cc in Broad Range of Low Profiles
- Conductive Polymer Electrode
- Lower ESR
- Undertab Terminations Layout:
  - » High Volumetric Efficiency
  - » High PCB Assembly Density
  - » High Capacitance in Smaller Dimensions
- 3x reflow cycles according to J-STD-020
- 100% Surge Current Tested
- 8 Case Sizes Available

APPLICATIONS

- Consumer Applications (e.g. Mobiles, MP3 etc.)
- Bulk Decoupling of SoC (System on Chip)

RoHS COMPLIANT

NOTE: Conductive Polymer Capacitors are designed to operate within the limits of the environmental conditions specified for each series. If operated continuously at their maximum temperature and / or humidity limit, or beyond these limits, capacitors may exhibit a parametric shift in capacitance and increases in ESR. These changes may occur earlier if the specified environmental conditions are exceeded. Similarly, their normal operational time period will be significantly extended if their general duty cycle includes operation below maximum temperature within humidity controlled environments. Careful attention should be paid to maximum temperature with associated high humidity environments as well as voltage derating, ripple current and current surges. Please reference the KYOCERA AVX Conductive Polymer Capacitor Guidelines for more information or contact factory for application assistance.

Moisture Sensitivity Level (MSL) is defined according to J-STD-020.
All technical data relates to an ambient temperature of +25°C. Capacitance and DF are measured at 120Hz, 0.5RMS with DC bias of 2.2 volts.
DCL is measured at rated voltage after 5 minutes.
ESR allowed to move up to 1.25 times catalog limit post mounting. For typical weight and composition, refer to the *Product Safety Information Datasheet* at the end of the Polymer, Tantalum and Niobium Oxide Capacitors catalog.
NOTE: KYOCERA AVX reserves the right to supply higher voltage ratings in the same case size to the same reliability standards.
