About This Document

Murata's Type 2DT is a small and high-performance module based on Semtech LR1110 chipset, supporting LoRa + IEEE 802.11/b/g/n Wi-Fi Passive Scanner + GNSS. This datasheet describes Type 2DT module in detail.

Please be aware that an important notice concerning availability, standard warranty and use in critical applications of Murata products and disclaimers thereto appears at the end of this specification sheet.

Audience & Purpose

Intended audience includes any customer looking to integrate this module into their product, specifically RF, hardware, software, and systems engineers.

Document Conventions

Table 1 describes the document conventions.

Code Snippet comment (preceded by "//") may exist in the original code.

1 Scope

This specification applies to 2DT module for LoRa + Wi-Fi + GNSS.

2 Features & Benefits

2.1 Features

- SEMTECH LR1110 RF IC
 - LoRa Transceiver
 - Wi-Fi Passive Scanner
 - Multi-Constellation GNSS Scanner (GPS & BeiDou)
- Low power consumption
- TCXO for maximum frequency accuracy
- Structure: Metal case + PCB (Lead Free Module)
- Weight: 0.32g
- MSL: MSL3
- LGA Surface-mount type
- RoHS compliant

Product name	LBAA0XV2DT-158
Technology	LoRa, Wi-Fi Scanner, GNSS
Peripheral I/F	SPI, GPIOs
Dimensions	9.98 x 8.70 x 1.74 mm (max)
Operating Temperature	- 40 °C to 85 °C
Regulatory certification	FCC, ISED, CE, JRL

2.2 Benefits

- Small/highly integrated Geolocation module available in the market
- Allows simple RF design with minimum additional components required
- Simplifies PCB design as fewer layers are required on PCB of end products
- Single solution for both Indoor & Outdoor Geolocation use cases
- The module's RF certification can facilitate the end-product certification
- Quick time to market solution

3 Ordering Information

8 Absolute Maximum Ratings

The absolute maximum ratings are shown in **Table 7**.

Table 7: Absolute and Maximum Ratings

Parameter		Minimum	Maximum	Unit
Storage Temperature		-40	+85	°C
Supply Voltage	VDD	-0.3	3.6	V

Stresses in excess of the absolute ratings may cause permanent damage. Functional operation is not implied under these conditions. Exposure to absolute ratings for extended periods of time may adversely affect reliability. No damage assuming only one parameter is set at limit at a time with all other parameters are set within operating condition.

9 Operating Conditions

This section describes the operating conditions.

9.1 Operating Conditions

The operating conditions are shown in 错误!未找到引用源。

Table 8: Operating Conditions

Parameter		Minimum	Typical	Maximum	Unit
Operating Temperature		-40		+85	°C
Operating Voltage	VDD	1.8		3.6	V

Operation beyond the recommended operating conditions is neither recommended nor guaranteed.

9.2 Digital I/O Requirements

错误!未找到引用源。 shows the digital I/O characteristics of Type 2DT.

Symbol	Parameter	Condition	Minimum	Typical	Maximum	Unit
V _{IH}	Input high voltage		0.7*VDD		VDD+0.3	V
V _{IL}	Input low voltage		-0.3		0.3* VDD	V
V _{OH}	Output high voltage	I _{max} = 2.5 mA	0.9*VDD		VDD	V
V _{OL}	Output low voltage	I _{max} = -2.5 mA	0		0.1* VDD	V

9.3 Package Thermal Conditions

The package thermal conditions are as below:

- $R\psi_{jt}$: TBC
- $R\psi_{jt} = TBC$

T_j : Junction temperature ($^{\circ}\text{C}$), T_t : Top temperature ($^{\circ}\text{C}$), P : Total Power Consumption (W)

10 Power Sequence

10.1 Power-On Sequence

This section describes the power-on sequences along with their parameters.

There is no special demand on the VDD pins and other module pins.

10.2 Power-Off Sequence

This section describes the power-off sequences along with their parameters.

There is no special demand on the VDD pins and other module pins.

11 Host Interface Specification

11.1 SPI Specifications

The SPI interface gives access to the configuration register via a synchronous full-duplex protocol corresponding to CPOL = 0 and CPHA = 0 in Motorola/Freescale nomenclature. Only the slave side is implemented. A transfer is always started by a falling edge of NSS. MISO is high impedance when NSS is high. The SPI runs on the external SCK clock to allow high speed up to 16 MHz. All timings in following table are given for a max load cap of 10 pF.

Table 10: SPI Timing Requirements

Symbol	Description	Minimum	Typical	Maximum	Unit
t1	NSS falling edge to SCK setup time	31.25	-	-	ns
t2	SCK period	61.5	-	-	ns
t3	SCK high time	31.25	-	-	ns
t4	MOSI to SCK hold time	5	-	-	ns
t5	MOSI to SCK setup time	15	-	-	ns
t6	NSS falling to MISO delay	0	-	15	ns
t7	SCK falling to MISO delay	0	-	15	ns

14 General Regulatory Certification for LBAA0XV2DT

This section contains the following topics:

- Application model part number
- Label
- Package Label
- Country of Origin

14.1 Application Model Part Number

Basically, we apply for “LBAA0XV2DT” in each country.

14.2 Label

Figure 7 shows the label of Type 2DT module.

Figure 7: 2DT Module Label

14.3 Package Label

14.4 Country of Origin

China

SHENZHEN MURATA TECHNOLOGY CO., LTD.

Some countries have applied for two countries, China and Japan, in preparation for future factory changes, but the production site in the delivery specifications is the above-mentioned factory in China.

15 Radio Regulatory Certification by Country for LBAA0XV2DT

This section includes the following regulatory certifications:

- JRL
- FCC
- ISED
- CE

15.1 JRL

15.2 FCC

FCC ID : VPYLB2DT

15.3 ISED

IC: 772C-LB2DT

15.4 Europe

Compliant with EN 300220-1 V3.1.1, EN 300220-2 V3.2.1, EN 300328 V2.2.2, EN 303413 V1.2.1, EN 62311:2020

16 Tape and Reel Packing

This section provides the general specifications for tape and reel packing.

16.1 Dimensions of Tape (Plastic Tape)

The dimension of the tape is as follows:

- The corner and ridge radiuses (R) of inside cavity are 0.3 mm maximum.
- Cumulative tolerance of 10 pitches of the sprocket hole is ± 0.15 mm
- Measuring of cavity positioning is based on cavity center in accordance with JIS/IES standard.

4	Base tape. As specified in Dimensions of Tape (Plastic tape)  .

16.4 Leader and Tail Tape

The leader and tail tape are shown in 错误!未找到引用源。.

Figure 12: Leader and Tail Tape

- The tape for chips is wound clockwise, the feeding holes to the right side as the tape is pulled toward the user.
- The cover tape and base tape are not adhered at no components area for 250 mm minimum
- Tear off strength against pulling of cover tape: 5 N minimum
- Packaging unit: 800 pcs. / Reel
- Tape material:
 - Base tape: Plastic
 - Reel: Plastic
 - Cover tape, cavity tape and reel are made the anti-static processing.
- Peeling off force: 1.3 N maximum in the direction of peeling as shown in **Figure 13**.

Tape and reel must be sealed with the anti-humidity plastic bag. The bag contains the desiccant and the humidity indicator.

17 Notice

17.1 Storage Conditions

- Please use this product within 6 months after receipt.
- The product shall be stored without opening the packing under the ambient temperature from 5 to 35 °C and humidity from 20 ~ 70 %RH (Packing materials may be deformed at the temperature over 40 °C).
- The product left more than 6 months after reception; it needs to be confirmed the solderability before used.
- The product *must* be stored in noncorrosive gas (Cl₂, NH₃, SO₂, NO_x, etc.).
- Any excess mechanical shock including, but not limited to, sticking the packing materials by sharp object and dropping the product, *must* not be applied in order not to damage the packing materials.
- This product is applicable to MSL3 (Based on JEDEC Standard J-STD-020)
 - After the packing opened, the product *must* be stored at ≤30 °C / <60 %RH and the product *should* be used within 168 hours after opening.
 - When the color of the indicator in the packing changed, the product shall be baked before soldering.
- Baking condition: 125 +5/-0 °C, 24 hours, 1 time
- The products must be baked on the heat-resistant tray because the material (Base Tape, Reel Tape and Cover Tape) is not heat-resistant.

17.2 Handling Conditions

- Be careful in handling or transporting products because excessive stress or mechanical shock may break products.
- Handle with care if products may have cracks or damages on their terminals. If there is any such damage, the characteristics of products may change. *Do not touch* products with bare hands that may result in poor solder ability and destroy by static electrical charge.

17.3 Standard PCB Design (Land Pattern and Dimensions)

- All the ground terminals should be connected to the ground patterns. Furthermore, the ground pattern should be provided between IN and OUT terminals. Please refer to the specifications for the standard land dimensions.
- The recommended land pattern and dimensions is as Murata's standard. The characteristics of products may vary depending on the pattern drawing method, grounding method, land dimensions, land forming method of the NC terminals and the PCB material and thickness. Therefore, be sure to verify the characteristics in the actual set. When using non-standard lands, contact Murata beforehand.

17.4 Notice for Chip Placer

When placing products on the PCB, products may be stressed and broken by uneven forces from a worn-out chucking locating claw or a suction nozzle. To prevent products from damages, be sure to follow the specifications for the maintenance of the chip placer being used. For the positioning of products on the PCB, be aware that mechanical chucking may damage products.

17.5 Soldering Conditions

The recommendation conditions of soldering are as in the following figure.

Soldering must be carried out by the above-mentioned conditions to prevent products from damage. Set up the highest temperature of reflow within 260 °C. Contact Murata before use if concerning other soldering conditions.

Figure 15: Reflow soldering standard conditions (Example)

Please use the reflow within 2 times.

Use rosin type flux or weakly active flux with a chlorine content of 0.2 wt % or less.

17.6 Cleaning

Since this Product is Moisture Sensitive, any cleaning is not recommended. If any cleaning process is done the customer is responsible for any issues or failures caused by the cleaning process.

17.7 Operational Environment Conditions

Products are designed to work for electronic products under normal environmental conditions (ambient temperature, humidity, and pressure). Therefore, products have no problems to be used under the similar conditions to the above-mentioned. However, if products are used under the following circumstances, it may damage products and leakage of electricity and abnormal temperature may occur.

- In an atmosphere containing corrosive gas (Cl₂, NH₃, SO_x, NO_x etc.).
- In an atmosphere containing combustible and volatile gases.
- Dusty place.
- Direct sunlight place.
- Water splashing place.
- Humid place where water condenses.
- Freezing place.

If there are possibilities for products to be used under the preceding clause, consult with Murata before actual use.

Do not apply static electricity or excessive voltage while assembling and measuring, as it might be a cause of degradation or destruction to apply static electricity to products.

17.8 Input Power Capacity

Products shall be used in the input power capacity as specified in this specification.

Inform Murata beforehand, in case that the components are used beyond such input power capacity range.
