ABB miniature circuit breakers

The first of its kind in 1923, and still the best today. We didn't just change the market — we created it.

In 1923, Hugo Stotz made history. He invented a new and innovative circuit breaker that would revolutionize the world of electrical installation and safety.

The combination of a thermal and magnetic trip unit in a single device became the “thermal-electromagnetical circuit breaker,” that was then patented in 1924 as the first-ever resettable fuse. Because it could simply be screwed into usual fuse sockets, it was a huge success for the company, which has now been located in Germany for over 120 years.

This revolutionary circuit breaker was able to interrupt an electrical circuit in case of overload and was reclosable, whereas the metal wire in previous fuses would melt when too much current passed through it and had to be replaced.

Another key benefit to this pioneering design was that no electrician was needed to change fuses any more — even an unskilled person could do it. To this day, that is still the case.

Then

In 1923, Hugo Stotz combined a thermal and a magnetic trip unit in a single device that could be screwed into regular fuse sockets. Stotz's invention opened a new world in electrical installation.

Now

The latest generation of ABB mini circuit breakers (MCBs) provides the highest safety solutions for all types of electrical protection — and meets all relevant standards worldwide.

System pro M compact™ MCBs

Miniature circuit breakers protect installations against overload and short circuit to ensure reliability and safety for operations. ABB MCBs feature current-limiting technology, which reduces the risk of arc flash and increases protection of connected cables and loads.

ABB MCBs are available with a wide variety of accessories, thus providing solutions for all types of applications.

Quality and sustainability

Our MCBs are built to last. We achieve this through an uncompromising commitment to quality. We use only the best components and materials. All materials comply with EU (RoHS, REACH) standards for sustainability and are halogen-free. Every unit is inspected three times before it leaves our facilities.

Our reputation for innovation, quality and performance is built into every ABB circuit breaker with these patented features:

Terminal

Extended size with insulation for IP20 protection and new pressure plate for improved conductor connection — easier to handle, safer to use

Contact design

With a trip-free snap-action mechanism for improved arc movement and safe, optimized switching

Switching mechanism

New design and assembly increases reliability of triggering — even under tough conditions

Tripping device

Optimized arc extinguishing system improves safety

Patented twin terminals with captive screws add comfort and safety

Product code identifies basic technical specs

Patented tripping device ensures uncompromised safety

Contact-position indicator with direct contact connection clearly indicates position for extra safety

Simple switch mechanism provides immediate system availability after a fault

Laser printing resists scratches and solvents

Unit performs at its high rated voltage

Patented housing design offers environmental friendliness and optimized performance

The details make the difference

Miniature circuit breakers made by ABB

System pro M compact offers a complete range of first-class quality products including a variety of miniature circuit breakers that provide the right solution when both size and performance matter.

— 01 Patented IP20 touch-safe terminals

— 02 Red/green indicator shows actual position of contacts

— 03 Approvals printed on the dome

— 04 Safe, easy and fast connection with busbars (fixed length or cuttable to length)

— 05 Various cable combinations can be used with the dual terminals

— 06 For interrupt ratings up to 50 kA (S800 series)

Patented IP20 finger-safe terminals

Extended size with insulation for IP20 protection and new pressure plate for improved conductor connection available for the S200 series. Additionally, our innovative ring-lug terminals are available (SU200MR and S200MR). MCBs of the S800U series are equipped with a convertible lug or ring-lug terminal.

Contact position indication

All System pro M compact MCBs are equipped with real contact position indication (CPI). This allows for quick identification of the MCB's state, on or off, if maintenance is required. Working together, both the position of the toggle and the color of the CPI offer clear indication of the MCB's contact position, providing additional safety. If an event has occurred, the MCB provides reliable information on its state.

Approvals printed on the dome

SU200M MCBs comply with UL489/CSA 22.2 No. 5 and carry approvals for other relevant markets or segments in which they may be used. For ease of identification, certification markings are printed on the dome and side of the MCB.

Comfort connection

Dedicated busbars are available, depending on the application. The new cut-to-length UL Vario busbar is available for the SU200M. A special ring-lug busbar for the SU200MR and S200M was designed to fit these devices.

Maximum flexibility

The dual terminals with two separate slots allow connection of busbars and cables in separate spots. They also allow for installation of up to four cables in each terminal (2+2).

Extra power needed?

S800 series MCBs offer high performance in terms of current, voltage and short circuit interrupt ratings.

—
MCB factory in Heidelberg, Germany

Logout/tag out device

The S2C-LOTO-L can be field installed on every 1-, 2- and 3-pole MCB from ABB (except for S800 series). It can be removed and reused on other MCBs if needed with extra connecting pins. The S2C-LOTO-L prevents a padlock from being installed on an MCB that's in the closed/ON position only.

Patented housing design

The SU200M range uses the latest halogen-free thermoplastic, making it possible to recycle the whole MCB and reduce environmental pollution.

Fully automated production/assembly with 100% quality control

Product selection guide

MCBs per UL 489 / CSA 22.2 No. 5 — SU200M / SUP200M / SU200MR / S200UDC / SU200ML / S800U / S804U-UCZ

UL 489

This standard covers circuit breakers (molded-case circuit breakers for protection of service entrance, feeder and branch circuits). These circuit breakers are specifically intended to provide service entrance, feeder and branch circuit protection in accordance with the National Installation Codes in Annex B, Ref. No. 1. This standard also covers instantaneous-trip circuit breakers (circuit interrupters) specifically intended for use as part of a combination motor controller in accordance with the National Installation Codes in Annex B, Ref. No. 1.

UL 1077

This standard covers supplementary protectors for use as an additional level of protection where branch circuit protection is already provided or not required. Typical applications are in control circuits or within appliances. Compliance with this standard is acceptable for use as a component of an end product.

Accessories for UL 489 applications

Auxiliary contacts
The auxiliary contacts will signal whether the breaker is in the ON or OFF position.

	Description	Cat. no.
	For field mounting: right side	S2C-H6RU

Shunt trip
For remote tripping of breaker, a shunt trip device can be added to the MCB. The solenoid device opens the breaker after control voltage is applied.

	Description	Cat. no.
	S2C-A...U	
	For field mounting: right side 12...60 V AC/DC	S2C-A1U
	For field mounting: right side 110...415 V AC 110...250 V DC	S2C-A2U

Note: For shafts and handles, refer to parts in the Disconnect Switch and MCCB section.

Bell alarm
The bell alarm includes a set of contacts that will only signal when the breaker has tripped. Typically, the contacts would be connected to an alarm or bell to signal the operator that an over-current trip has occurred. The bell alarm also includes a test button for testing the alarm contacts without opening the breaker.

	Description	Cat. no.
	For field mounting: right side	S2C-S6RU

Possible mounting arrangements of MCB accessories

Legend	
Auxiliary contact	H
Bell alarm/auxiliary contact	S/H
Bell alarm/auxiliary contact used as auxiliary contact	S/H (H)
Shunt trip	ST

Note: Right-hand mount accessories cannot be used in conjunction with S2C-DH, rotary operating mechanism.

Accessories for UL 489 applications

Rotary operating mechanism
For through-the-door operation with a pistol or selector handle in applications where the breaker is also used as a main disconnecting means (disconnect switch).

Description		Cat. no.
	Rotary handle mechanism can be used with any 5 or 6 mm shaft and any kind of handle (for example, selector handles, pistol handles)	S2C-DH

Lockout/tag out device

Product description		Cat. no.
	For single-pole MCBs	S2C-LOTO-S
	For multi-pole MCBs	S2C-LOTO-M
		S2C-LOTO-L

Flange for rear board mounting 6 modules — IP40	0.070	1	ME 6
Flange for rear board mounting 8 modules — IP40	0.080	1	ME 8

Accessories for UL 1077 applications

Auxiliary contacts

The auxiliary contacts will signal whether the breaker is in the ON or OFF position.

	Description	Cat. no.
For field mounting: right side		
	Auxiliary contact 1 CO	S2C-H6R
	Auxiliary contact 1 NO/1 NC	S2C-H6-11R
	Auxiliary contact 2 NO	S2C-H6-20R
	Auxiliary contact 2 NC	S2C-H6-02R

Bell alarm — signal contact

The bell alarm includes a set of contacts that will only signal when the breaker has tripped. Typically, the contacts would be connected to an alarm or bell to signal the operator that an over-current trip has occurred. The bell alarm also includes a test button for testing the alarm contacts without opening the breaker.

	Description	Cat. no.
	For field mounting: right side	S2C-S/H6R

Shunt trip

For remote tripping of breaker, a shunt trip device can be added to the MCB. The solenoid device opens the breaker after control voltage is applied.

	Description	Cat. no.
For field mounting: right side		
	A1-12-110 V AC (12–110 V DC)	S3C-A1
	A2-110-415 V AC (110–250 V DC)	S3C-A2

Locking device

	Description	Cat. no.
	Locking device, 3 mm	SA1
	Padlock with two keys	SA2

Bottom-fitted auxiliary contact

	Description	Cat. no.
	Auxiliary contact 1 NC	S2C-H01
	Auxiliary contact 1 NO	S2C-H10

Accessories for UL 1077 applications

Busbars PS...CB and accessories according to UL 508

For MCBs ST200M, S200MUC and S300P

Busbars type PS...CB are used for quick and easy line side wiring of miniature circuit breakers according to UL 1077 as well as fuse disconnectors E90. The entire product line, including the accessories, is approved according to UL 508 (cULus) and can be used for applications in supplementary protection circuits in UL and CSA markets

Application and installation

- UL listing according to UL 508
- For UL and CSA applications
- For use with MCB types according UL 1077, ranges S200, S200M, S200P, S200MUC, S200MTUC, ST200M and fuse disconnectors E90
- Quick and easy installation
- Can be cut off to the required length
- Suitable for AC and DC applications
- Global use in UL, CSA and IEC markets

Product range

- 1-, 2-, 3-pole types
- 18 mm² and 25 mm² cross section
- For MCBs with or without auxiliary contact
- Touch-safe thanks to end caps and electric shock-protection caps installed over unused busbar pins
- Rated current max. 200 A
- Rated voltage according to UL
 - 1-phase: 1,000 V AC/DC
 - 2-/3-phase: 600 V AC/DC
- End caps, electric shock-protection caps and feeder terminals as accessories

Busbars PS...CB and accessories according to UL 508

		* Tightening torque according to UL486A, Table 21, Clauses 9.1.9.4 and 9.1.9.6
	Stripping length	~ 14 mm; 9/16"
	Conductor material	Copper
Approvals		UL 508 CE, RoHS and REACH compliant
		In addition to the approval of the feeder terminal, the approval of the switching device used must also be considered.
Instruction of installation		The feeder terminals are single-phase. In case of a combination of multiple terminals with installation side by side, e.g. for multipole or DC applications, the required creepage and air leakage distances must be considered and observed.
		To ensure protection against electrical electric shock, the pin length of the feeder terminal must not exceed the depth of the contact area of the connected device. Irrespective of the current carrying capacity of the feeder terminal, the max. rated current of the devices terminal must not be exceeded.

S800W-RSU Remote switching unit

UL 489

Remote switching unit

	Description	Cat. no.
	Remote switching unit (breaker is not included)	S800W-RSU

S800-RSU cable including plug

	Description	Cat. no.
	3 meter cable 0.5 mm ² (20 AWG) including 10- pole Micro-Fit 3.0™ plug	S800-RSU-CP

Key features

- The remote switching unit S800W-RSU has a brushless high precision DC motor to ensure fast remote control operation
- Low power consumption
- Short switching times
- The S800W-RSU is mounted on any multi-pole S800 high-performance MCB
- Installation and wiring can be field installable
- The connection is done by a 10-pole Micro-Fit 3.0™ (not included in delivery)
- The S800W-RSU can be operated by a standard pushbutton or drive by a PLC

Switching times

- OFF -> ON <<500 ms
from signal to contact closing
- ON -> OFF <<250 ms
from signal to contact opening
- TRIP -> OFF -> ON <<1500 ms
from signal to contact closing

Safety intelligence

- Inputs are deactivated when detecting manual use
- All outputs become active when spindle is rotated more than 360°
- S800W-RSU is locked for five minutes after three switching attempts leading to a trip
- Manual switch off possible for three- and four-pole devices

Technical specifications

Operational voltage	24 V DC
Current consumption I_{ms}	2, 5
Standby current $I_{Standby}$	< 50 mA
Switching time OFF-ON	< 500 msec
Switching time ON-OFF	<250 msec
Ambient operation temperature	-25 °C to 70 °C
Number of switching operations	10.000
Maximum cable lengths (20 AWG/0.5 mm ²)	10 m
Degree of protection (mounted)	IP2
Weight	0.661387 lb.
Connection	10-pole Micro-Fit 3.0™

Diagrams

Approximate dimensions shown are in mm.

Accessories

S800U and S804U-UCZ

Shunt trip

For remote tripping of breaker, a shunt trip device can be added to the MCB. The device opens the breaker after control voltage is applied.

	Description (for field mounting, left side)	Cat. no.
	Shunt operation release 24 V AC/DC	S800-SOR24
	Shunt operation release 48–130 V AC/DC	S800-SOR130
	Shunt operation release 110–250 V AC/DC	S800-SOR250

Under-voltage release

When control voltage drops below approximately 50 percent of rated voltage, the UVR opens the breaker. The breaker cannot be operated unless proper control voltage is first applied to the UVR coil.

	Description	Cat. no.
	Under-voltage release 24–36 V AC/DC	S800-UVR36
	Under-voltage release 48–60 V AC/DC	S800-UVR60
	Under-voltage release 110–130 V AC/DC	S800-UVR130
	Under-voltage release 220–250 V AC/DC	S800-UVR250

Auxiliary contacts

The auxiliary contacts will signal whether the breaker is in the ON or OFF position.

	Description	Cat. no.
	Auxiliary contact	S800-AUX

Bell alarm

The bell alarm includes a set of contacts that will only signal when the breaker has tripped. Typically, the contacts would be connected to an alarm or bell to signal the operator that an overcurrent trip has occurred. The bell alarm also includes a test button for testing the alarm contacts without opening the breaker.

	Cat. no.
	S800-AUX/ALT

Ring tongue adapter

	Cat. no.
	S800-RT2125

Accessories

S800U and S804U-UCZ

Rotary operating mechanism

Allows “through-the-door” operation.

	Description	Cat. no.
	Handle mechanism	S800-RD

	Description	Cat. no.
	Gray rotary handle	S800-RHE-H

UL locking device

	Description	Cat. no.
	Red rotary handle	S800-RHE-EM

	Description	Cat. no.
	Shaft extension	S800-RHE-S

	Description	Cat. no.
	Padlock not included	S800U-PLL

Trip curves

Trip curves are essential for circuit protection by MCBs. With 5 different trip curves, MCBs from ABB provide the highest safety and protection for all types of applications and loads.

Z Curve

- $2 \times I_n < I_{\text{Tripp}} < 3 \times I_n$ (AC)
- $2 \times I_n < I_{\text{Tripp}} < 4.5 \times I_n$ (DC)

B Curve

- $3 \times I_n < I_{\text{Tripp}} < 5 \times I_n$ (AC)
- $4 \times I_n < I_{\text{Tripp}} < 7 \times I_n$ (DC)

C Curve

- $5 \times I_n < I_{\text{Tripp}} < 10 \times I_n$ (AC)
- $7 \times I_n < I_{\text{Tripp}} < 15 \times I_n$ (DC)

D Curve

- $10 \times I_n < I_{\text{Tripp}} < 20 \times I_n$ (AC)
- $10 \times I_n < I_{\text{Tripp}} < 21 \times I_n$ (DC)

K Curve

- $10 \times I_n < I_{\text{Tripp}} < 14 \times I_n$ (AC)
- $10 \times I_n < I_{\text{Tripp}} < 22.4 \times I_n$ (DC)
