# 1. Introduction

This Quick Start Guide provides an overview of how to boot the Android image for the VIA ARTiGO A3000 starter kit and configure the supported hardware functions in the build.

The VIA ARTiGO A3000 Android 12.0 EVK is developed based on the MediaTek Android 12.0 BSP, and it enables the hardware features of the VIA ARTiGO A3000.

## 1.1 EVK Package Contents

There are three folders in the package listed as below.

Firmware folder	Description
VIA_ARTiGO_A3000_Android_12.0_EVK.zip	Android evaluation image
Document folder	Description
VIA_ARTiGO_A3000_Android_12.0_EVK_Quick_Start_Guide.pdf	Quick Start Guide
Tool folder	Description
VIA_Android_USB_Driver.zip	VIA USB driver
PoseDetector_Image.apk	Sample test program

### 1.1.1 Firmware Folder Contents

**VIA\_ARTiGO\_A3000\_Android\_12.0\_EVK.zip:** Contains the precompiled Android image for evaluating the VIA ARTiGO A3000.

### 1.1.2 Document Folder Contents

**VIA\_ARTiGO\_A3000\_Android\_12.0\_EVK\_Quick\_Start\_Guide.pdf:** This Quick Start Guide provides an overview on how to boot the Android image for the VIA ARTiGO A3000 and configure the supported hardware functions in the build.

### 1.1.3 Tool Folder Contents

**VIA\_Android\_USB\_Driver.zip:** The VIA driver for ADB-over-USB.

**PoseDetector\_Image.apk:** A sample program to test MTK NeuroPilot AI APU hardware acceleration.

## 1.2 Version Information and Supported Features

- Kernel version: 5.10.101
- Evaluation image: Android 12.0
- Development based on MediaTek Android 12.0 BSP
- Supports eMMC boot
- Supports HDMI display
- Supports HDMI audio output
- Supports COM port as RS-232 mode (TX/RX)
- Supports 10/100Mbps Ethernet port
- Supports MediaTek MT6357 Line-out and Mic-in
- Supports MediaTek MT6631 Wi-Fi 802.11ac and Bluetooth 5.0
- Supports VIA EMIO-2573 (EC25) 4G LTE mobile broadband miniPCIe module
- Supports MediaTek NeuroPilot AI APU hardware acceleration

## 2. Image Installation

This section explains the setup requirements for installing the Android evaluation image on the VIA ARTiGO A3000.

The precompiled images are provided in the "Firmware" folder.

### 2.1 Installing with the Fastboot Mode

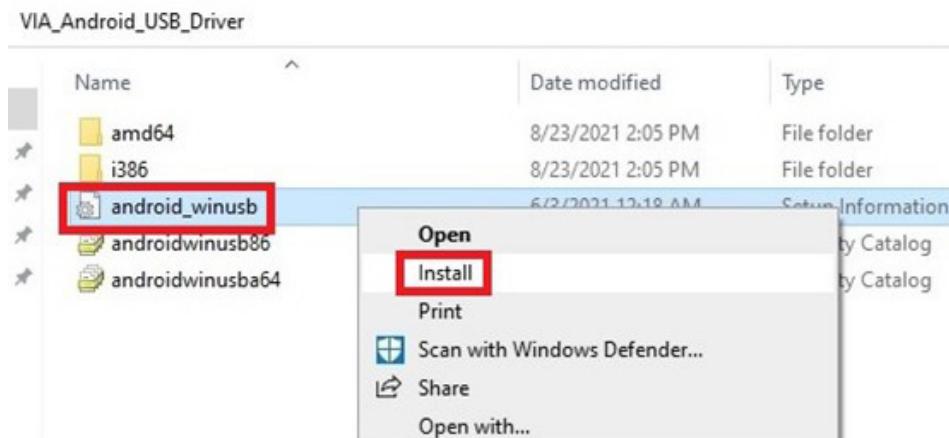

Follow the steps below to install Android EVK image:

#### Step 1

Prepare the "fastboot tool" and install the "VIA USB driver" into your Windows 10 host machine.

To get the "fastboot tool" for Windows, please refer to the "SDK Platform Tools release notes" chapter on the Android developer website <https://developer.android.com/studio/releases/platform-tools>.

To install the "VIA USB driver", right-click "android\_winusb" and select "Install".

Then click "Install" when the installer opens.

When the installer finishes, it will show a confirmation message "The operation completed successfully".

#### Step 2

Connect the Windows 10 host machine and the VIA ARTiGO A3000 through the Micro USB 2.0 port using the Micro USB cable.

Micro USB 2.0 port diagram

**Step 3**

Plug in the AC-to-DC power adapter to power on the VIA ARTiGO A3000 .

If the EVK image is not installed, the VIA ARTiGO A3000 will stop at "fastboot: processing commands" as shown in the debug console below. Proceed to step 4 directly.

```
[4714] [USB] Unrecognized Speed 0
[4881] [USB] [INTR] Speed Change
[4881] [USB] HS is detected
[4882] [USB] [INTR] Reset
[5419] fastboot: processing commands
[5419] usb_read: remaining len 64, xfer len 64
```

**Fastboot Mode**

If the EVK image is already installed, use the following command to enter the Fastboot Mode on your Windows 10 host machine.

```
D:\platform-tools>adb shell reboot bootloader
```

**Note:**

After powering on the VIA ARTiGO A3000, make sure the Windows 10 host machine detects it as an ADB device.

**Step 4**

Extract the VIA\_ARTiGO\_A3000\_Android\_12.0\_EVK.zip file on your Windows 10 host machine.

To install the image, use the following command:

```
D:\VIA_ARTiGO_A3000_Android_12.0_EVK>set PATH=D:\platform-tools;%PATH%
D:\VIA_ARTiGO_A3000_Android_12.0_EVK>viaflash.exe --android

```

### Step 5

Unplug the AC-to-DC power adapter to power off the VIA ARTiGO A3000.

### Step 6

Unplug the Micro USB cable, press the Power Button for 2 seconds and release it to power on the VIA ARTiGO A3000.

When the boot process has completed, you will see the Android 12.0 desktop.

## 3. Hardware Functions

This section explains how to enable and test the hardware functions precompiled in the VIA ARTiGO A3000 Android 12.0 EVK.

### 3.1 Enabling ADB Debugging

Follow the steps below to enable ADB debugging:

#### Step 1

Connect the Windows 10 host machine and the VIA ARTiGO A3000 through the Micro USB 2.0 port using the Micro USB cable.

Micro USB 2.0 port diagram

#### Step 2

Power on the VIA ARTiGO A3000 to initiate the boot process.

#### Step 3

When the VIA ARTiGO A3000 has completed booting, use the following command to open ADB debugging:

```
E:\platform-tools>adb shell
```

### 3.2 Changing the Kernel Debug Level

To disable the kernel messages, modify the debug level using the following command:

```
console:/ # su
console:/ # echo 3 > /proc/sys/kernel/printk
```

### 3.3 Checking the BSP Version

To check the BSP version, use the following command:

```
console:/ # cat /proc/version
```

## 3.4 DVFS

To verify the DVFS (Dynamic Voltage Frequency Scaling) function and list all the supported features, use the following commands:

```
console:/ # ls -l /sys/devices/system/cpu/cpu0/cpufreq/
total 0
-r-----r-- 1 root root 4096 2022-02-24 18:16 affected_cpus
-r-----r-- 1 root root 4096 2022-02-24 18:16 cpuinfo_cur_freq
-r-----r-- 1 root root 4096 2022-02-24 18:16 cpuinfo_max_freq
-r-----r-- 1 root root 4096 2022-02-24 18:16 cpuinfo_min_freq
-r-----r-- 1 root root 4096 2022-02-24 18:16 cpuinfo_transition_latency
-r-----r-- 1 root root 4096 2022-02-24 18:16 related_cpus
-r-----r-- 1 root root 4096 2000-01-01 00:00 scaling_available_frequencies
-r-----r-- 1 root root 4096 2022-02-24 18:16 scaling_available_governors
-r-----r-- 1 root root 4096 2022-02-24 18:16 scaling_cur_freq
-r-----r-- 1 root root 4096 2022-02-24 18:16 scaling_driver
-rw-r--r-- 1 root root 4096 2022-02-23 15:46 scaling_governor
-rw-rw---- 1 system system 4096 2000-01-01 00:00 scaling_max_freq
-rw-rw-r-- 1 system system 4096 2000-01-01 00:00 scaling_min_freq
-rw-r--r-- 1 root root 4096 2022-02-24 18:16 scaling_setspeed
drwxr-xr-x 2 root root 0 2022-02-24 18:16 schedutil
drwxr-xr-x 2 root root 0 2000-01-01 00:00 stats
console:/ #
```

To check the supported and current CPU frequency, use the following commands:

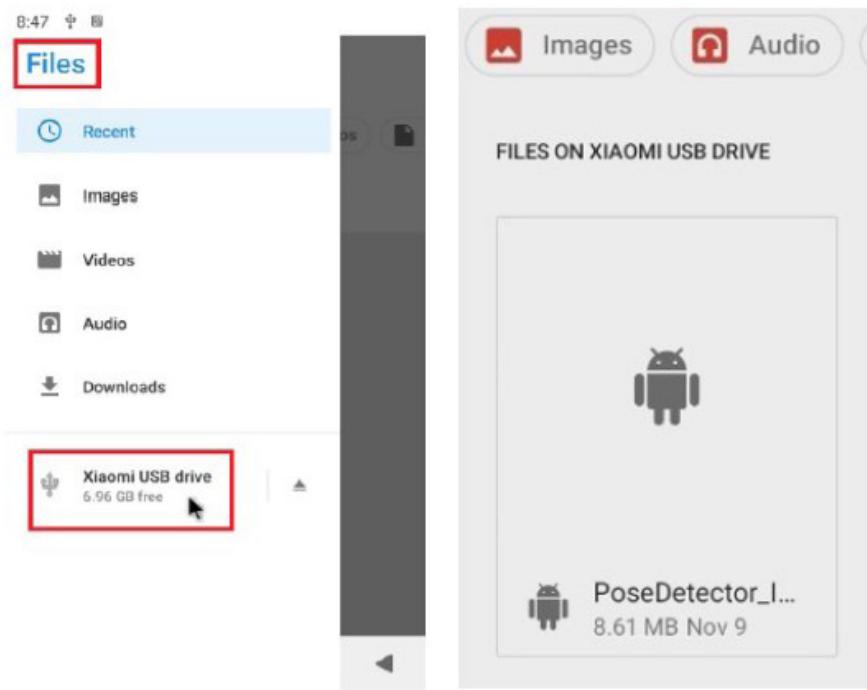

```
console:/ # cat /sys/devices/system/cpu/cpu0/cpufreq/scaling_available_frequencies
850000 918000 987000 1056000 1125000 1216000 1308000 1400000 1466000 1533000 1633000 1700000
1767000 1834000 1917000 2001000
console:/ # cat /sys/devices/system/cpu/cpu0/cpufreq/cpuinfo_cur_freq
1633000
```

## 3.5 MTK NeuroPilot AI APU Hardware Acceleration

We recommend running the "PoseDetector\_Image.apk" sample program for testing MTK NeuroPilot AI APU hardware acceleration. To install the program, follow the steps below:

1. Copy the "PoseDetector\_Image.apk" file to a USB drive and connect the USB drive to the VIA ARTiGO A3000.

2. Next, navigate to "Files" and click on the USB drive's name to find "PoseDetector\_Image.apk" as shown below. Double-click the program

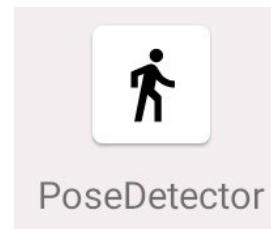

3. When the program opens, it will display a dialog box as shown below. Click "Continue" to confirm.

Your tablet and personal data are more vulnerable to attack by unknown apps. By installing this app, you agree that you are responsible for any damage to your tablet or loss of data that may result from its use.

**CANCEL** **CONTINUE**

4. After installation, double-click "PoseDetector" to run the program.

5. Check the Pose Detection inference time on the bottom left corner of the program:

- If the inference time is less than 200 ms, MTK NeuroPilot AI APU hardware acceleration is enabled and running correctly.
- If the inference time is greater than 200 ms, MTK NeuroPilot AI APU hardware acceleration is disabled.
