

COVID-19: APM HEXSEAL'S SEALING SOLUTIONS FOR MISSION-CRITICAL APPLICATIONS

In the midst of the COVID-19 pandemic, manufacturers have been pressed to help fulfill critical societal needs. As an essential business, APM Hexseal has proudly continued to manufacture mission-critical components for a variety of medical, military, and industrial applications.

During this trying time, we've supplied thousands of sealing boots and fasteners used to build ventilators, hospital beds, and COVID-19 test units.

Medical equipment is right in the middle of a storm of germs. It is used and operated among people who potentially carry and spread bacteria.

APM Hexseal's sealing boots and hardware are made for this purpose. Because our products are resistant to many sanitizing chemicals, they can safely be used for a wide range of equipment— especially those that require frequent sanitizing or wash down with hazardous sprays and chemicals.

Our sealing boots, bushings, and hardware are especially in demand among medical manufacturers, but we serve a variety of other industries as well.

Sensitive equipment in harsh environments?

Cover it. Seal it. Protect it. Ask the Experts at APM Hexseal.

EVER BETTER.
