

IO-Link Data Map

This document refers to the following IODD file: Banner_Engineering-Q90R2-20240517-IODD1.1.xml.

The IODD file and support files can be found on www.bannerengineering.com under the download section of the product family page.

Communication Parameters

The following communication parameters are used.

Parameter	Value	Parameter	Value
IO-Link revision	V1.1	Port class	A
Process Data In length	120-bit	SIO mode	Yes
Process Data Out length	N/A	Smart sensor profile	Yes
Bit Rate	38400 bps	Block parameterization	Yes
Minimum cycle time	2.3 ms	Data Storage	Yes
		ISDU Supported	Yes

IO-Link Process Data In (Device to Master)

Process Data In is transmitted cyclically to the IO-Link master from the IO-Link device.

The Q90R2 IO-Link Process Data is 120-bits and can be configured using parameter data to include the measurement distance, the state of the stability indicator, and/or the state of both output channels. This information is sent to the IO-Link master every 2.3 ms.

Process Data Configuration 1: Radial Detection Area

Subindex	Name	Number of Bits	Data Values
1	Switch Signal Channel 1 State	1	0 = Inactive, 1 = Active
2	Switch Signal Channel 1 Stability	1	0 = no target or marginal, 1 = valid
3	Switch Signal Channel 2 State	1	0 = Inactive, 1 = Active
4	Switch Signal Channel 2 Stability	1	0 = no target or marginal, 1 = valid
5	Switch Signal Channel 1 Distance (mm)	16	0 to 21000
6	Switch Signal Channel 1 Beam Angle (degrees)	16	-60 to 60
7	Switch Signal Channel 1 Velocity (m/s)	16	-90 to 90 (-9.0 to 9.0 m/s)
8	Switch Signal Channel 1 Signal Strength	8	0 to 255
9	Switch Signal Channel 2 Distance (mm)	16	0 to 21000
10	Switch Signal Channel 2 Beam Angle (degrees)	16	-60 to 60
11	Switch Signal Channel 2 Velocity (m/s)	16	-90 to 90 (-9.0 to 9.0 m/s)
12	Switch Signal Channel 2 Signal Strength	8	0 to 255

Example with Process Data Configuration 1

Based on the values in the example data above:

Switch Signal Channel 1 State	Active
Switch Signal Channel 1 Stability	Valid
Switch Signal Channel 2 State	Active
Switch Signal Channel 2 Stability	Valid
Switch Signal Channel 1 Distance	15000 mm
Switch Signal Channel 1 Beam Angle	20 degrees
Switch Signal Channel 1 Velocity	50 = 5.0 m/s
Switch Signal Channel 1 Signal Strength	20
Switch Signal Channel 2 Distance	10000 mm
Switch Signal Channel 2 Beam Angle	40 degrees
Switch Signal Channel 2 Velocity	50 = 5.0 m/s
Switch Signal Channel 2 Signal Strength	20

Process Data Configuration 2: Rectangular Detection Area

Subindex	Name	Number of Bits	Data Values
1	Switch Signal Channel 1 State	1	0 = Inactive, 1 = Active
2	Switch Signal Channel 1 Stability	1	0 = no target or marginal, 1 = valid

Example with Process Data Configuration 2

Based on the values in the example data above:

Switch Signal Channel 1 State	Active
Switch Signal Channel 1 Stability	Valid
Switch Signal Channel 2 State	Active
Switch Signal Channel 2 Stability	Valid
Switch Signal Channel 1 X	15000 mm
Switch Signal Channel 1 Y	10000 mm
Switch Signal Channel 1 Velocity	50 = 5 m/s
Switch Signal Channel 1 Signal Strength	20
Switch Signal Channel 2 X	10000 mm
Switch Signal Channel 2 Y	15000 mm
Switch Signal Channel 2 Velocity	50 = 5 m/s
Switch Signal Channel 2 Signal Strength	20

IO-Link Process Data Out (Master to Device)

Not applicable.

Parameters Set Using IO-Link

These parameters can be read from and/or written to an IO-Link model of the Q90R2 sensor. Also included is information about whether the variable in question is saved during Data Storage and whether the variable came from the IO-Link Smart Sensor Profile. Unlike Process Data In, which is transmitted from the IO-Link device to the IO-Link master cyclically, these parameters are read or written acyclically as needed.

IO-Link Events

Events are acyclic transmissions from the IO-Link device to the IO-Link master. Events can be error messages and/or warning or maintenance data.

Code	Type	Name	Description
6200 (0x1838)	Error	Event 1	Test Events for IO-Link Conformance
6201 (0x1839)	Error	Event 2	Test Events for IO-Link Conformance
25376 (0x6320)	Error	Parameter error	Check datasheet and values
36000 (0x8ca0)	Warning	All-time Run Time Event	Event indicating the corresponding configured running time has elapsed
36001 (0x8ca1)	Warning	Resettable Run Time Event	Event indicating the corresponding configured running time has elapsed
36003 (0x8ca3)	Notification	Teach Completed Event	Event indicating a teach has been completed
36004 (0x8ca4)	Notification	Factory Settings Restored Event	Event indicating that the factory settings have been restored
36005 (0x8ca5)	Notification	Teach Coerced Event	Event indicating a taught condition resulting in a setpoint being coerced; taught setpoint was updated
36007 (0x8ca7)	Notification	Teach Failed Event	Event indicating an invalid target condition was attempted to be taught; taught setpoint was not updated
36096 (0x8d00)	Error	Transceiver Fault Event	Event indicating that an error has occurred with the radar transceiver
36097 (0x8d01)	Error	System Fault Event	Contact Banner Engineering to resolve
