

1 Murata Type 2NR EVK V4 Contents

This document is dedicated to 2NR EVK V4. The revision of the EVK is printed on the board. If you are using another version of the EVK, please refer to the corresponding documents. .

The Murata Type 2NR EVK is an evaluation and application development kit for the Murata Type 2NR BLE module. The EVK supports three wireless radios: Bluetooth® Low Energy, IEEE802.15.4, and NFC. The platform is based on Nordic's nRF54L15 chip. The EVK part-number is LBMA0ZZ2NR-EVK. It contains the following items:

- 1 × Murata Type 2NR Evaluation Board

- 1× Murata Type 2NR EVK V4 Quick Start Guide (this document)

2 Power up

- Connect the EVK to a host PC using a USB cable.
- Verify that LED 4 turns on after power is applied.
- Confirm that the EVK is detected by the host PC.
- Launch the required development tools and SDK environment.

3 Evaluation

For detailed information about operating the Type 2NR EVK and SDK patches, refer to the Type 2NR EVK User Guide at [Murata Type 2NR product website](#).

The evaluation workflow is similar to the Nordic nRF54L15 DK. Related SDKs, tools, and documentation are available from Nordic Semiconductor.
