

# PRESSURE TESTING IN ACCORDANCE WITH THE NASM82496 STANDARD

Making sure that the parts you use meet all of the appropriate standards can be complicated. Military contractors must be able to manufacture products within very stringent standards to ensure they will operate effectively in harsh or hostile environments.

Now there is one less part to worry about—APM Hexseal is excited to announce that we now offer operating pressure tests as required by NASM82496, paragraphs 4.5.1., 4.5.2., and 4.6.3.

## MILITARY STANDARD PARTS

To meet the NASM82496 standards, parts must be pressure- and time-tested to be certain that they meet the very highest standards: military industry requirements. To ensure our parts function according to these standards, our knowledgeable engineering and test staff perform all of the necessary tests on-site. Each NASM82496 part comes with a guarantee of the product's exceptional quality, as shown by a certification of the completed test.

These parts meet military standards, so they can be used by all branches of the military, as well as the contractors who produce the specialized and sophisticated technology used in our nation's defense. We are proud to support this important work.

To give you the opportunity to see the exceptional quality of our work, we will pay for the first test of our Seelskrews® ourselves. We stand behind our innovative and highly functional Seelskrews® and Seelbolts® products.

These unique self-sealing screws and bolts form a reliable seal that is reusable and can be counted on to prevent any contamination, protecting your equipment even in extreme environments. To meet a wide range of needs, we carry Seelskrews® in a broad selection of standard thread sizes, with many O-ring elastomer options.

Some of the other customizations we offer include:

- **Tamper-resistant drives**
- **Specialty thread-forming variations**
- **Thread captivation**
- **Paint and finish options**

## CONTACT APM HEXSEAL

At APM Hexseal we have been an industry leader in quality sealing solutions since 1947. Our extensive track record of reliable products speaks for itself while our commitment to innovation ensures we will continue to provide the advanced sealing solutions our customers require in the future.

We have a long history of developing and manufacturing sealing products that protect sensitive mechanical and electronic components from contaminants, in the most hostile environments. Our extensive catalog of sealing hardware and elastomeric covers include a complete line of self-sealing, reusable fasteners and sealing washers. With exceptional technical support, a stellar engineering team, and top-tier machine shop, we are confident that we can find the solutions you need.

Have any questions or concerns about NASM82496 standards or our parts? Ask the Experts at APM Hexseal.

**EVER BETTER.**
