

SFTM

SPOTFAST[®]

FASTENERS

Allows permanent joining
in metal to metal and
metal to PCB/plastic panels.

Allows permanent joining in metal to metal and metal to PCB/plastic panels

- Alternative to riveting and spot welding.
- No special installation equipment required.
- Flush or sub-flush on both sides.
- Minimal space requirements.
- No countersinking or other hole treatment required.
- Can be installed blind into bottom (panel 2) sheet.
- Can be concealed with paints and powder coatings.
- RoHS compliant.

Unlike rivets that “bulb” during installation, the ultimately flush profile of SpotFast® fasteners allows for unobtrusive attachment requiring minimal space. A smooth surface is retained for finishing and fasteners can be concealed easily with paints or powder coatings.

Fastener drawings and models are available at www.pemnet.com. Custom sizes are available on special order. [Contact us](#) for more information.

SF™ fasteners create a permanent, flush joining of two sheets. Squeezing the fastener into place causes a cold-flow of panel material into the fastener’s two separate clinch profiles. The SF fastener is **designed for joining metal to metal**. They install smooth with the top sheet, and flush or sub-flush with the bottom sheet. Fasteners can attach two metal sheets too difficult to weld; fasten sheets of unequal thicknesses; join dissimilar metals unable to be welded; and even attach ultra-thin metal sections.

SFP™ fasteners offer the same benefits as the SF fastener but are made from precipitation hardened stainless steel **for installation into stainless steel sheets**.

SFW™ fasteners offer the same benefits as the SF fastener but are specifically **designed to allow pivoting (hinging) of two sheets of metal**. A wave washer provides the consistent torsion to allow repeatable rotation.

SFK™ fasteners are **designed for flush joining of metal to PCB/plastic panels**.

SpotFast fasteners shown actual size.

Can be installed blind into bottom (panel 2) sheet.

Spotfast® Fastener Selector Guide

Type	Primary Use				
	Joining two panels of similar or dissimilar metals	Joining two panels when one or more is stainless steel	Joining a metal panel to a PCB or plastic panel	Single point hinging applications	Offers highest corrosion resistance in product family
SF	■			■ (1)	
SFP	■ (1)	■		■ (1)	■
SFW	■ (1)			■	
SFK	■ (1)		■	■ (1)	

(1) Not primary use.

Metal To Metal

SF™ fastener installed into unequal thickness sheets. Fastener is smooth with top of panel 1.

Hinging Applications

SFW™ fastener offers flush-mounted, smooth pivot point.

SF™ fastener installed sub-flush with panel 2. Fastener will be flush at minimum sheet thickness.

Metal To PCB/Plastic

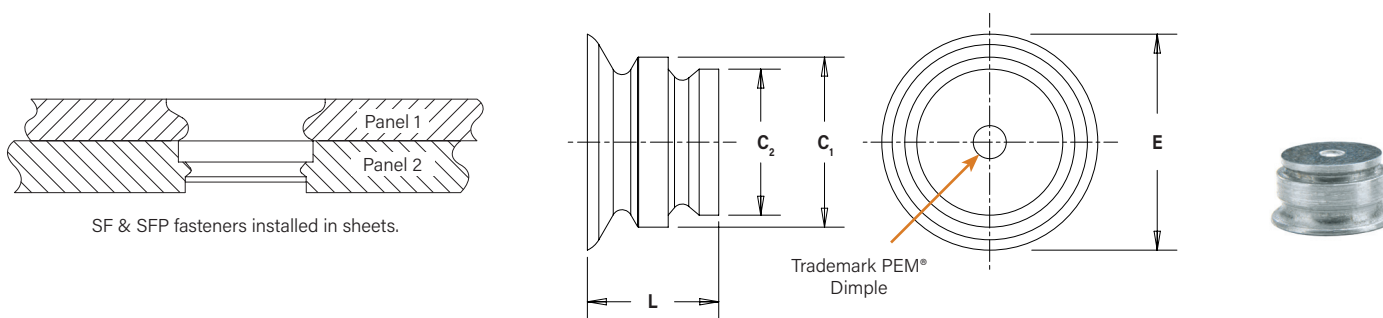

SFK™ fastener joining metal to plastic.

Sheets as thin as .005" / 0.13 mm may be attached to thicker sheets using a PEM® SpotFast® fastener. The thin sheet must be panel 1 and the "L" dimension must be equal to or less than the combined panel thicknesses. Consult our Applications Engineering department for more information.

Installation

SF™ And SFP™ Fasteners

- Step 1. Prepare properly sized mounting hole in both panels. Do not perform any secondary operations such as deburring. If the hole is punched, be sure to install fastener into punched side of hole.
- Step 2. Place Panel 2 with smaller mounting hole on anvil and align Panel 1 mounting hole with the mounting hole of Panel 2. Place the smaller diameter end of the fastener through the mounting holes as shown in the drawing to the right. (See figure SF-1).
- Step 3. With the punch and anvil surfaces parallel, apply squeezing force until the fastener is flush with the top of Panel 1. (See figure SF-1).

NOTE: To use SF or SFP fasteners as a flush-mounted pivot point, for best results, install SpotFast fastener into Panel 1 first, then place Panel 2 over fastener and squeeze again.

Installation Tooling - SF and SFP Fasteners

Size	HAEGER® Part Number		PEMSERTER® Part Number	
	Anvil	Punch	Anvil	Punch
SF-3/SF-5	H-108-0019L	H-108-0019L	975200046	975200048

SFW™ Fasteners

- Step 1. Prepare properly sized mounting hole in both panels. Do not perform any secondary operations such as deburring. If the hole is punched, be sure to install fastener into punched side of hole.
- Step 2. Using only Panel 1, with the punch and anvil surfaces parallel, apply squeezing force until the fastener is flush with the top of Panel 1. (See figure SFW-1).
- Step 3. To ensure proper function of washer, place washer over installed fastener (concave side facing up), then place Panel 2 over fastener. Apply squeezing force. Keep gap between Panel 2 and anvil. (See "G" in figure SFW-2).

Installation Notes

- For best results we recommend using a HAEGER® or PEMSERTER® machine for installation of PEM self-clinching fasteners. Please check our website for more information.
- Visit the Animation Library on our website to view the installation process for select products.

(1) Published installation forces are for general reference. Actual set-up and confirmation of complete installation should be made by observing proper seating of fastener as described in the installation steps. Other performance values reported are averages when all proper installation parameters and procedures are followed. Variations in mounting hole size, sheet material, and installation procedure may affect performance. Performance testing this product in your application is recommended. We will be happy to provide technical assistance and/or samples for this purpose.

(2) In most applications, pullout strength of the SpotFast fastener in Panel 1 exceeds pushout strength of Panel 2.

All PEM® products meet our stringent quality standards. If you require additional industry or other specific [quality certifications](#), special procedures and/or part numbers are required. Please contact your local sales office or representative for further information.

Regulatory [compliance information](#) is available in Technical Support section of our website. Specifications subject to change without notice. See our website for the most current version of this bulletin.
