

mediaCON®

With the introduction of mediaCON, Neutrik brings to the market a true locking solution for USB Type-C connectors. mediaCON is eminently suitable for connecting together devices like hard drives, cameras, video monitors, media capture equipment, audio interfaces, computer hardware, etc.

All mediaCON products are designed for data rates up to 10 GB/s (USB 3.1), 100 W of power and 10,000 mating cycles.

The mediaCON product line

The mediaCON product line consists of four parts—two chassis connectors (receptacles) and two different lengths of cable assemblies.

mediaCON chassis connectors

The space-saving, flush-mount mediaCON chassis connectors can be mounted from the front or the rear.

NMC-C is the standard mediaCON receptacle, without an electrical component.

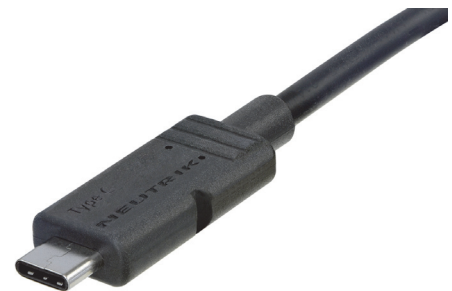

NMC-C-HR adds an integrated USB IF approved receptacle. The drawing for NCM-C-HR includes PCB placement of the USB receptacle.

mediaCON cable assemblies

High-quality cable assemblies are available in two different lengths—0.5 m (**NMK-20U-0.5**) and 1.0 m (**NMK-20U-1.0**).

The molded casing of the cable connector disappears as it is plugged in to the mediaCON receptacle and locks in place. This ensures not only a reliable connection but also protects against dirt and mechanical stress.

100% USB Type-C compatibility

All mediaCON receptacles and cable assemblies are fully compatible with standard USB Type-C products from all manufacturers: mediaCON receptacles accept *any* cable equipped with a USB Type-C connector; mediaCON cable assemblies fit into *any* USB Type-C receptacles. However, for a *locking* solution, Neutrik mediaCON must be used for both the receptacle and the cable assembly.
