

PIC32MZ EMBEDDED CONNECTIVITY (EC)

PIC32MZ Embedded Connectivity (EC) 100-pin to 100-pin Plug-In Module (PIM) Information Sheet

The PIC32MZ Embedded Connectivity (EC) PIM is designed to demonstrate the capabilities of the PIC32MZ Embedded Connectivity (EC) family of devices using development boards, such as the Explorer 16 Development Board, which supports 100-pin PIM interfaces.

The PIC32MZ Embedded Connectivity (EC) is a family of high performance 32-bit microcontrollers.

Table 1 shows the mapping between the 100-pin PIM interface board functions and a 100-pin device.

Figure 1 through Figure 2 provide schematics for the example device and the PIM.

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
= ISO/TS 16949 =

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
