

## 10.1" HDMI TFT Modules

HDMI interface displays are now bigger than ever before at Newhaven Display. Our HDMI TFT product line is expanding to include two new 10.1" size modules. These two new products feature our 10.1" TFT paired with our custom PCB designed by us here in Elgin, Illinois for HDMI compatibility, among other features. The two options are differentiated by a Capacitive Touch Screen version, and a version with no touch panel. Both options come standard with a durable steel mounting bracket featuring server-rack-height threaded mounting holes.

Both of the 10.1" HDMI TFT Modules are 1024x600 pixel resolution and sport MVA technology for 75° viewing from all angles. The boards on these products also have a Texas Instruments Audio Amplifier embedded to allow for the use of the audio channel already supported by HDMI. Easily up-scale your display project thanks to simple, standard HDMI interfacing.

No-touch Module

- **NHD-10.1-HDMI-A-RSXV**

Capacitive Touch Module

- **NHD-10.1-HDMI-A-RSXV-CTU**
