PAM8904

18VPP Output Sounder Driver with Auto Standby

The PAM8904 is a piezo sounder driver with integrated charge pump boost converter.

The device is capable of driving a ceramic/piezo sounder with 18Vpp from a 3V power supply. The charge pump can operate in either 1X, 2X and 3X modes.

The boost converter operates at a fixed frequency of 1.0MHz and provides a 9V output with a minimum number of external components. The PAM8904 can drive up to 15nF loading. Its unique drive technology provides small inrush current, low EMI and high efficiency.

The built-in automatic shutdown and wake up, guarantees longer battery life.

The PAM8904 features thermal shutdown, over current protection, over voltage protection and under voltage lock-out.

It is available in a 16pin U-QFN3030 package.

The Diodes Advantage

The PAM8904 low quiescent current solution for sounder driver.

- **Up to 18VPP Output**
Bigger sound output
- **1X, 2X and 3X charge-pump selectable**
Three SPL levels selections
- **Automatic Standby and Wake-up Control**
Saves battery power
- **Input signal 20 Hz to 300KHz**
Wider input suitable for different applications
- **No Voltage Cross Output At Shutdown Mode**
No current consumed
- **SO-16 low pin count package**
Small PCB area

Applications

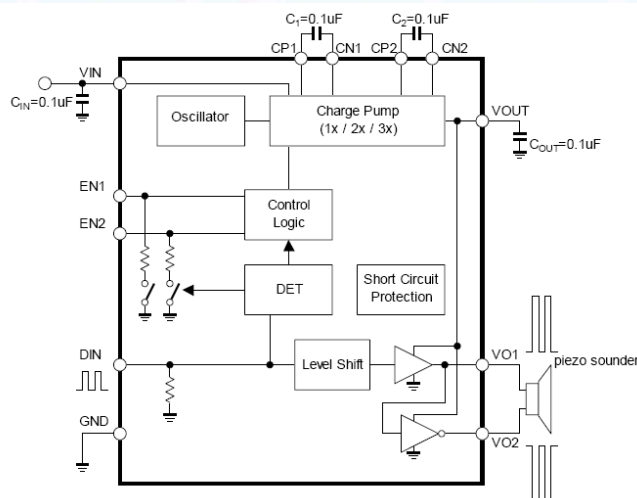

- Health care system
- Alarm clock
- Security devices
- Home appliances

New Product Announcement

PAM8904

Typical Application:

Diodes Medium Power Class-D Audio Amplifier

Product	Description	VIN(V)	IQ (m A)	η	GAIN (dB)	SNR (dB)	PSRR (dB)	Package
PAM8008	2X3W with DC Vol. Control & PL & Anti-saturation	2.5- 5.5	6	0.89	4 Selection	95	-60	WCSP2x2-16 QFN4x4-20
