

## Mini-WECo to BNC Patch Cable

### Product Overview

Cinch Connectivity Solutions' Trompeter RF Connectiviy brand has expanded it's product offering to include Mini-WECo to BNC cable assemblies.

Modern video distribution and processing systems often rely on the flexibility offered by pathing systems. These systems allow for the routing of data from node to node. As densities have increased, the need for more compact panel solutions has risen. Cinch/Trompeter has addressed this by expanding their current patch cable offering to now include the use of Mini-WECo connectors along with the existing WECo suite of assemblies. This provides much more density on the patch panel interface.

#### Features

- Industry Standard, Compact Design
- Noise Protection
- Machined
- Bright nickel-plated
- Machined PTFE

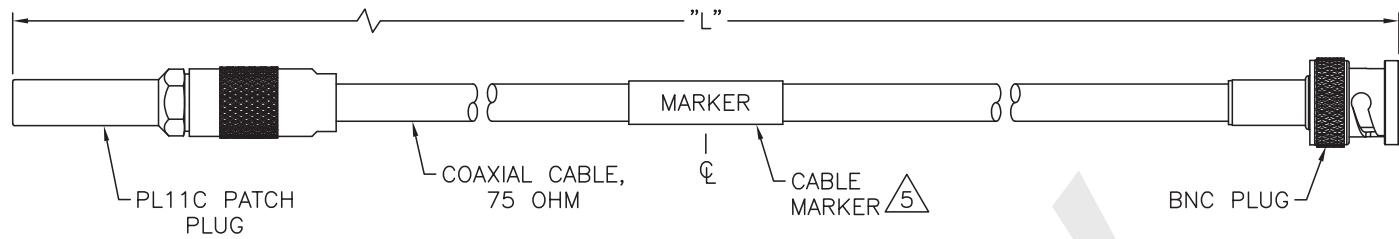

#### Benefits

- Higher quality signal
- Providing better intermateability; improving EMI/RFI suppression and reduced signal loss
- Resists tarnishing and the associated reduction of conductivity
- Superior dielectric properties and heat resistance for long life and ultimate performance

#### Applications

- Patch Panels
- Form factors Currently using WECo Standard and Mini-WECo Connectors
- Video Production & Processing Equipment

## Assemblies Construction and Lengths Definitions

Part Number	Description	Length
UPCMWX-12-75	Cable Assembly Mini-WECO / RG589 / BNC	12"
UPCMWX-18-75	Cable Assembly Mini-WECO / RG589 / BNC	18"
UPCMWX-24-75	Cable Assembly Mini-WECO / RG589 / BNC	24"
UPCMWX-36-75	Cable Assembly Mini-WECO / RG589 / BNC	36"
