Stand-alone access control system for one or two doors

The new StrikeMaster ES is a robust and reliable Keypad Access Control System for installations requiring elevated security levels.

Constructed to survive in exposed, outdoor or unsupervised environments these systems combine the field proven durability of the StrikeMaster keypad with a separate, remotely secured electronic control module. The control module along with a dedicated high spec power supply is contained within a tamper alarmed steel enclosure. This enclosure is located within the secured building, protected from criminal attempts to breach or disable building security systems.

The control module supports both IN and OUT functionality of either one or two keypads (one or two doors).

Available in vandal resistant or robust illuminated versions.
